Subject: SUBMISSION regarding RAW MILK

Regarding Proposal P1007: Primary Production & Processing Requirements for Raw Milk Products.

To Whom It May Concern:

We are in favour of safely produced, natural raw milk.

We are the grandparents of a child who has suffered serious and debilitating eczema from 6 months old, and who was diagnosed with an allergy to conventionally processed milk and dairy products (and further supervised elimination diets confirmed a continued allergy/intolerance to conventional milk products). We were pleasantly surprised to see that not only did raw milk fail to produce an allergic reaction externally, but substituting raw milk and raw dairy products under supervision brought great improvement to our grandson's condition. The conventional milk allergy continues to be confirmed as ongoing. Raw milk and the yoghurt, cheese and sour cream made from it has proved to be the only acceptable dairy source for him. Appropriate legislation will ensure the safety and availability of raw milk for future generations of Australians like our grandson.

Thank you,
