Subject: Submission - P1007 Primary Production & Processing of Raw Milk

Dear Sirs,

As a naturopath and homoeopath, I prescribe raw milk and raw milk products for a number of my patients as it is our only form of animal products that our society chooses to eat that contains all the benefits to naturally and cheaply improve the health of individuals whose bodies have become compromised due to disease and the over use of modern antibiotics, prescription drugs and environmental substances.

I think it is imperative that raw milk be made available to the general public and that's its healing qualities become better known. Disease is on the increase and in raw milk we have a vital source of rich nutrients to help turn this around. I support any bill that will make raw milk readily available for all.

Sincerely

Jennifer Garrett
