Concerning:

Proposal P1007: Primary Production & Processing Requirements for Raw Milk Products.

Dear Sir/Madam,

I am writing to submit my communities feelings and stance on the issue of the demand for the availability of RAW milk products. Many of us do not appreciate the health eroding effects of pasteurised milk[ not to mention the abomination of homogenisation], considering more dangerous pathogens CAN and do survive the process than the less problematic and largely health affirming and beneficial symbiotic bacteria that it kills.

Speaking from my own experience as a dairy maid for a small and organic operation, Raw milk is an amazing substance that is vastly superior to the milk i WAS FORCED to pasteurise for the public. Seeing is believing! For the people who would like to consume RAW unprocessed milk products from well treated dairy cows Please allow this availability to resume...it is time people were given back the responsibility over there own health, given the availability of information and the evidence of the health issues caused by the ingestion of modern processed milk products.

Sincerely and competently

Penelope Claire Scull
