To whom it may concern

I wish to make a submission regarding retaining the right to use Raw Milk.

Firstly my 16 year old son who normally cannot tolerate pasteurised milk due to blocked ears and what one can only describe as a 'snotty' nose and the need to carry a handkerchief was on raw milk for about 12 months until he went overseas in July. While he was only on raw milk, ear infections completely ceased and the need to carry a handkerchief has stopped due to non existent mucous in his nasal passages.

My son moved to Germany for 6 months in July. Interestingly enough he has had continual problems with blocked ears again and very mucousy and has had to stop consuming dairy once again and has needed medication for his 'wet' ears.

I may be contacted at 04 565 3692 or 0274 370785
