**Subject:** Proposal P1007: Primary Production & Processing Requirements for Raw Milk Products.

Dear Submission person,

I am writing to voice my support of raw milk products being made available in Australia again. I understand that there are terrific health benefits in avoiding the processing that 'modern' milk suffers and that with current practices there is minimal risk of spoilage or contamination of raw milk. I cannot see why this product should not be available to those who want it - if there is a perceived risk then a warning could be attached to raw milk products, but I note that imported raw-milk cheeses have no such warning. Many believe that processed milk carries a large health cost to the community. I myself pop calcium pills instead of suffering the processed milk which my body rejects. I think it likely that raw milk will work better in my body and I would like the choice to try it. Thanks for your consideration.

Sincerely

Nigel Machin
