Subject: Submission on Application A1039 - Low THC Hemp as a Food

Categories: Blue Category

To whom it may concern,

I would like hemp to be approved as a food for human consumption in Australia and New Zealand, and for it to be grown in these countries for that purpose. It is a wonderfully nutritious seed and I believe it is ridiculous that we can't already use it. I would like to be able to use it my diet for the high level of omega-3 fatty acids that it contains. I have no interest in marijuana use.

Yours sincerely

Sian Robinson
