Subject: GE Soy.

Categories: Blue Category

Dear Authority. Here we go again. Two more lines of Gebetic Soy to be let in. It makes me boil inside . Later Monsanto will say that New Zealanders are eating our products so they might as well grow them here anyway. What an e3vil company. Proven damage to animals and humans. Proven damage to the underground water from Glyphosate. Proven damage to the soil organisms. Proven evidence to to plants creating super weeds that have to controlled by more herbicides. The crops themselves are failing. Monsanto is forcing by stealth for countries in Africa and Aso plant trials by bribing people . Four million USA dollars last year alone. Is none of this taken into consideration by you. Stop letting the stuff in please, please. Please. Hugh Halliday. PS have you read all the information on my website www.declarenzge-gmfree. How do you sleep at night when you poisoning people with your decisions and allowing corporations to ruin the world and control the world. Monsanto has a mission to control world food supply and they are doing well since they created this mission at the end of the nineties. Who cares about the health of human beings, animals and the earth. It will have its revenge. The earth is alive. Hugh Halliday. You print out all that stuff on the website and people actually believe you.!!!
