Subject: Application No. is A1081 application name – Food derived from Herbicide-tolerant Soybean Event SYHT0H2

Follow Up Flag: Follow up
Flag Status: Completed

I am writing to express my concern about the introduction of foods containing GM soybean products into the Australian food supply.

Genetically modified foods have never been proven to be safe for human consumption in any long term study. This is a fact and not simply my opinion. The famous geneticist David Suzuki explains this very well here: <http://www.youtube.com/watch?v=2mBF1OOPdTo>

You'll notice that the author of the Safety Assessment document in the application has chosen their words very carefully. For example they have written:

"Soybean derived products have a range of food and feed as well as industrial uses and have a long history of safe use for both humans and livestock"

Notice they use the term "Soybean" NOT "GM Soybean" or "Soybean line SYHT0H2". Of course soybeans are safe to eat, but GM soybeans have never been proven to be safe, hence the author can't make that claim and instead refers to soybeans in general.

The Safety Assessment document is very technical but does not even once mention any long term human testing. This is because there has been none.

While the long term effects of eating GM foods are unknown, exposing the Australian public to this potential health hazard would be reckless and necessary.

Please put the health of the Australian public first and do not allow GM soybean products to enter the Australian Food Supply.

Regards
Gonzalo Fuentes
