Subject: Proposed irradiation of Queensland fruits

As a concerned consumer I urge you to stop the option of irradiation of Queensland fruits.

Irradiation doesn't kill viruses.it doesn't kill all bacteria and it doesn't remove any toxins in the fruits. It could give consumers a false sense of security over the handling of fruits.

In addition at least one product of irradiation alkylcyclobutanones promote cancer in rats and genetic damage in humans.

We have always been proud of our fruit lets keep it that way.
