Subject: Submission on A1193 Irradiation of all fresh fruit and vegetables

To whom it may concern,

My comment on this is: how can you even consider doing this?  
We want FRESH fruit and vegetables NOT ones that have been tampered with.  
No! No! No!

A1206 is a genetically modified bacillus. GM has no place in otherwise fresh untampered with foods. Everything will be contaminated with gm material. Genetically modification has never been what it was expected to be. No crops should be able to be sprayed with glyphosate and be ok for human consumption! We do not want these practices here in Australia!

A1193 Irradiation as a phytosanitiser.  
Why spend the money when we can wash the fruits and vegetables ourselves, like has been done for generations! We do not this type of 'wash'. Do you know if irradiation will affect the enzymes in the fresh food? Cooking destroys some but enzymes are the key to good digestion - why even risk this happening?

A1204 - from soya beans. Soy is already a suspect product and is one of the highest GM plants. Do not use this unnatural substance on our food!

Re-think this.  
Keep food REAL and stop messing with nature!

Kind regards,
