To whom it concerns,

Failure to regulate and certify GM foods and make their sources traceable will limit the export of such foods. I speak as a USA health food nut who just turned 80 but remain engaged in the fight for healthy air, water, and food and the preservation of human habitable habitats shrinking all around us due climate changes that appear unstoppable but still a bit mitigatable.

I recently saw something about Mexico forbidding the importing of GM corn to protect its treasured heritage varieties of corn threatened by imported GM corn and Roundup and Cymbalta etc.

I recall other countries banning USA beef etc due to outbreaks here of Mad Cow Disease.

Where have Agrochemical companies ever proven themselves to be trust worthy regarding their self-assessments of the safety of their GM foods?
