Subject: Submission on Rec 34 re labelling of irradiated food

Our family is absolutely against the irradiating of food, full stop ! It appears to be principally for food supermarkets to be able to sell , to unsuspecting consumers, food that is months old. Also this process has to kill off most of the nutritional value of the food. We absolutely demand that any such treated food be labelled. People have the right to know what they are buying, and the lies that are put out about the alleged value and safety of processed foods, are unconscionable and only benefit the giant food manufacturers ?! The only real foods are fresh foods, so now they are in the pipeline to be adulterated ?! What a disgrace ! No wonder so many people are now growing their own !
