Food derived from disease resistant banana line QCAV - 4 3/11/23

As a person with autoimmune issues caring for gut health and a young granddaughter with allergies, both of us with restricted food diets - but can tolerate bananas - I'm concerned about Gene Technology and food safety.

I request, until independent robust

scientific safety testing is undertaken, Application A1274 GM Banana must be declined.

So much needs to be considered for interference with human gut and blood health as well as impact on animal, birds, insect & environment health.

Young children could unknowingly eat GM bananas & harm their gut and blood. If marketed correctly would be appropriate to be labelled - Warning: "This banana contains Genetically Modified Organisms"

Before approval FSANZ must require independent laboratory/s for detection of trans genes to be made available for reference by health professionals & consumers.

FSANZ must not lose control of integrity of our food supply by allowing untested gene technology to harm health.
