I request the A1274 GM Banana must be declined.

This application does not provide adequate information relating to food safety for FSANZ experts or other submitters to consider.

There is no analysis of seven new proteins identified in the GM banana. There is no research on the implications of these proteins for food safety when the banana is eaten. Furthermore, there is a lack of evidence on the impact of different medicines that change the survival rate of GM constructs into the gut and bloodstream of consumers.

Regards,
