Submission for Proposal P1007: Primary Production & Processing of RAW Dairy Hi, I support the legalization of raw unpasturised dairy products.  
My reason is Raw milk has a much more fresh and superior taste to the pasturised milk. Also, I believe pasturization promotes the production of low quality milk because it can be 'cleaned up' with pasturization.  
Whereas Raw milk must be of high quality not to sour quickly.  
With modern milking and refrigeration technology I believe raw milk can be regulated to a safe standard.  
One bonus of raw milk is that adequate consumption appears to give complete immunity to dental decay, whereas pasturised milk does not confer this benefit.  
Thankyou for considering this proposal which if passed could improve the health of many people and at the same time save governments money on medical/dentistry bills.

Sincerely Joss Lester
