What could be more “Natural” than raw (unadulterated) Cow’s milk?

Check the history books and you’ll find pasteurization had its place then, but we don’t need this useless Destructive process anymore. (even Louis pasture admits its limitation)

I for one would gladly buy, promote and use Raw Cows milk if it were available and not currently outlawed to protect the Dairy Corporation.

Let the small family dairies compete in market place with “safe” RAW milk.....that would be the right thing to do.

Regards

John D Hanly
