

From: [REDACTED]
Subject: New Plant Breeding Techniques Workshop [SEC=UNCLASSIFIED]
Date: Friday, 9 March 2012 3:07:00 PM

Dear all

Arrangements for the workshop are progressing, and there are just a couple of things I would like some input on before we finalise the programme.

Firstly, could you please provide me with a brief bio for inclusion in the workshop programme.

Secondly, re the discussion topics for the workshop, we have a list of six techniques that we would like to discuss. We would like to propose that each of you take responsibility for one technique, prepare a brief (i.e. 5 minutes) presentation which gives an overview of the technique and then act as the discussion leader for that particular topic during the workshop. We have relevant background information and papers that can be provided to assist you with this. Now, as there are six topics and only five of you, one person will either need to cover two topics so if any of you would like to volunteer.....alternatively as I am also on the panel, I could take on one of the techniques myself. I have tentatively assigned you to a technique BUT these are just suggestions so if you would prefer a different technique then let me know.

Zn finger nuclease technology	?
Pioneer's seed production technology	[REDACTED]
Reverse breeding	[REDACTED]
Oligo-directed mutagenesis	[REDACTED]
GM rootstock grafting	[REDACTED]
Cisgenesis/intragenesis	[REDACTED]

Let me know what you think, and please send that bio info.

Regards
