Subject: Submission on A1035 (MON 87701)

I and my family strongly object to all applications for the trialling and development of GM foods, especially including these two applications.

There is increasing evidence of harmful effects to our soil and to humans ingesting these GM foods. The shame of it is that these harmful effects are often released.
I still am in shock that NZ food authorities are allowing any applications to be even considered for development in our country.

It is evident the majority of NZ'ers do not want any of it, neither does the rest of the world. Objections are publicised almost every week somewhere in the world, citing harmful effects.

There are no safe genetically modified foods. It is mind boggling to see any applications being received, much less considered.

I and my family of twenty strongly object to the above applications and all others.

Sincerely, and hoping government will wake up, see this direction is wrong for NZ. It is a pathway to disaster and ruin.

Cecelia Martin
