HEMP and Marijuana are 80 years overdue for legalising.

The seeds are food, the buds are medicine and the stalk is fibre.

When will you legalise it and stop living in 1940 for God's sake.

The cannabis economy is what's missing from Australia and the earth.

Wise up, modernise and be realistic.

It's time to uncover your eyes and remove the blindfold wrapped over your brains, all from a group of men in the 1930's in the USA, spreading nonsense, hysteria and panic all because of some greedy tree loppers and misinformed US government employees who took the bribe of the mighty DOLLAR.

Bring back the DOLLAR by legalising marijuana and hemp.

Hi again,

I may have appeared a bit annoyed in my first email, that's because there is so much scientific evidence on the nutritional benefits of hemp seeds for human consumption (Tibet and other countries have used hemp seeds in cooking for eons and still do, yet over-regulated and controlled white countries demonise hemp and marijuana, which was brainwashing from the USA lawmakers in the 1930's), for skin and facial use (I have personally witnessed a female friend try hemp seed oil and the facial skin results out-did all commercial products for sale as womens cosmetics), and marijuana is a medicine with so many benefits such as the cure for HIV/AIDS, cancers, cholesterol, diseases and basically as a miracle plant.

Why do you think the US states are fighting the federal US government to legalise hemp and marijuana- because they became aware of the coverups that had brainwashed them and the world into thinking that cannabis is dangerous since 1937 when in fact it is far safer than practically all of the commercial food, skin and medicinal products on the market today.

Regards,

Kristian Ayre BSc
