Subject: GM soy beans

Categories: Blue Category

I don't know why I am wasting my time venting my anger about this horror that is being rolled out into Australia, thanks to the heinous US Free Trade Agreement. These public consultations are a patronizing joke, when decisions have already been made and deals done behind closed doors! The government that signed this appalling sellout of Australia, and the ALP which also supported it, should hang their heads in shame. They are nothing but traitors! The people of Australia have made it abundantly clear on numerous occasions, and in numerous polls, that they do not want to eat or grow GM food and crops yet the government is just allowing giant corporations to do what they like. How can your organization even contemplate allowing a soy bean to be grown here, which can be sprayed with three different chemicals?! No one would eat anything like that, so will it just be sneaked into the food chain, like the GM canola in NSW, has been? Why is the government aiding and abetting the potential "poisoning" and "sterilizing" of its own people? This is what happened to poor lab animals which were forced on GM food! What is happening in this country is an outrage, especially the undermining of our clean, green, natural food supply. Isn't the world already poisoned enough with vile chemicals of all descriptions? Aren't you worried for the future of your own children and grandchildren? A Hodges and family [REDACTED]
