Subject: G.E. Soybean a1073

Hi Submission for A1073

My submission is to say No to this G.E. Soybean. This needs to be rejected.

My reason is because of the new study: A Comparison of the Effects of Three GM Corn Varieties on Mammalian Health,

<http://www.biolsci.org/v05p0706.htm>

It stated that Kidney, liver, and other important organs were effected is a negative way, so the risk is very high, so all G.E. frank-en foods are not suitable to be eaten by us and animals.

All G.E. products including this A1073 requires years of testing, but may still end in failure like in the study found, above.
