Re: A1081 – Food derived from Herbicide-tolerant Soybean Event SYHT0H2

Please do not approve this "food" until long term tests on humans and animals are done to assess safety. Increase the funding to non-GMO research for better solutions to feeding the world, global warming , drought, frost, safe pest tolerant crops etc.

See my previous submissions and the thousands of other submissions re GM and the dangers of creating monocultures. Read the publication by Jack Heinemann "Hope Not Hype." the biggest study on world agriculture and sustainability. Look at the latest information from the US about the massive bee deaths from pesticides.
