Subject: Submission A1094 Food derived from Herbicide-tolerant Cotton Line DAS -81910-7

Ref: Submission A1094 Food derived from Herbicide-tolerant Cotton Line DAS -81910-7

I strongly object for food derived from Herbicide-tolerant Cotton Line DAS -81910-7 to be approved.

There are numerous scientific studies showing medical complications to experimental animals after consumption of GM foods. These foods should be more appropriately tested by an independent panel of experts for health risks to humans before they are approved for consumption, or re-assessed when approval has already taken place.

These assessments should take place by independent experts and made public.

GM crops lead to an increase in the use of pesticides which pose serious threats to humans and the environment, and should be banned.

Evaluation of 2,4-D has shown major data gaps, covering human health effects, aquatic and wider environmental risks.

Studies of glufosinate ammonium show that greater exposure causes increased harmful effects to humans and the environment.

Food derived from Herbicide-tolerant Cotton Line DAS -81910-7 approval would lead to increased health risks and increased environmental risks.

I object to approval of food derived from Herbicide-tolerant Cotton Line DAS -81910-7, because it would increase risk of damage to human health and environment, and would just add an inferior food.
