Subject: GE cotton Line

Submission for the cotton seed line DAS 81910-7.

I am presuming that the new line incorporating the highly toxic 24D is because of super weeds in the Glyphosate Tolerant Cotton. Both are very toxic to the environment, soil, and people involved spraying. As you know from the monthly material I send you I strongly object to this madness of sprays and genetic engineering. Where will it end? What will be used when the weeds get the better of 24D.

Animals are fed cotton seed and in India the cows often died from grazing in the cotton fields . We do not need cotton seed oil or canola oil or palm kernel oil for that matter. Only rubbish foods contain these oils. Why allow it to be imported when it is not needed. You know as scientists that this madness can not go on. Supporting corporations that produce these types of food lines or cotton are not worth supporting. Your consideration is the health of New Zealanders.

This GE is a disaster and a big ponzi scheme that neither the earth or anything on it will recover from. Look at the kidney disease and Glyphosate. So it goes on. Completely in the thrall of corporate power that is ruling the earth at present. How is it that you do some things well with food safety and fail with others that are far more toxic. It is probably correct that the GE components are not in the oil but what about the sprays and their adjutants . Hugh Halliday www.declarenzge-gmfree.co.nz

I bet you let it in as I said with the previous submission.
