**Subject:** Submission on Application A1115: Irradiation of Blueberries and Raspberries

I understand that there is an application A1115 that calls for irradiation of blueberries and raspberries. I object to having the food I eat irradiated. As well as detrimentally affecting the quality and nutrients in the fruit, there are health concerns in consuming irradiated food. My health is important to me and fruits and vegetables in their natural form are the healthiest foods we can get. Let's not ruin that with unhealthy treatments. There are alternatives to irradiation for pest control that are not so harmful. In addition, labelling should be kept. I would like to know whether my food is irradiated or not, so that I have a choice about consuming it.

Please reject Application A1115. It is against public interest.

Regards  
Cathy Cheadle
