Subject: GM Products

I request that any application for introduction of GM products into the NZ food supply be denied. I do not support the introduction of Food derived from reduced Acrylamide Potential & Browning Potato Line E12. I ask that the application for approval of this be denied.

GMOs have not been proven safe without a doubt. There is much evidence against the safety of GM products.

Without mandatory labeling for GM foods and products, the right of the consumer to make informed choices for the health of oneself, one's family and children are taken away.

The concept of 'first do no harm' though a foundation of medicine applies in this case. The benefit of potatoes that do not turn brown and/or produce slightly less acrylamide in no way outweighs the risk of introducing this product or any GM foods into the food supply.

Please deny this application.

Dr Klaus Contag
