Subject: A1138 – Food derived from Provitamin A Rice Line GR2E

Dear Sirs, I write in support of the biosafety permit biosafety permit that IRRI are applying for that would allow Vitamin A-biofortified (GR2E) rice to be used for food, feed, and processing in the Philippines and the application to FSANZ to allow for any inadvertent co-mixing of rice should this occur to the Australian market.

I believe that this rice is as safe as (or even more safe because of all the additional testing that this rice has been subjected to) than other rices on the market and that there should be no more delay in getting this nutritious rice on the market to address the malnutrition issues that face a growing number of people in the world.

Yours sincerely,

Steve Jobling
