### Code Submission

Application/Proposal Number:	A1139
Organisation Name:	Individual
Organisation Type:	Individual
Representing:	Individual
Street Address:	[REDACTED]
Postal Address:	[REDACTED]
Contact Person:	Hester Robson
Contact Number:	[REDACTED]
Email Address:	[REDACTED]
Submission Text:	I ask that FSANZ decline the approval of application A1139 -

Food derived from Potato Lines E56, F10, J3, W8, X17 & Y9. I am strongly concerned about the safety of my food and our environment. I have food sensitivities that cause me pain and have to be very careful about food choices. I do not believe the introduction of GE substances to food has been proven over time to be safe. I strongly object to FSANZ approving application A1139 - Food derived from Potato Lines E56, F10, J3, W8, X17 & Y9. I ask that FSANZ decline the application

There is no comprehensive data showing evidence of unintended effects of the transgenic potato lines. It makes it mandatory for FSANZ to decline the approval. It is necessary for FSANZ to require whole genome sequencing to identify off-target mutations and also essential to ascertain the effects of unintended changes on global patterns of gene function.

FSANZ must require sequencing using molecular profiling analyses or "omics"- ◦ transcriptomics — gene expression

profiling, ° proteomics — protein composition profiling, ° metabolomics — profiling of metabolites, ° miR-omics – microRNA profiling

The best evidence available for effective safety assessment also requires long-term toxicity studies in established animal model systems. In the absence of these data to inform FSANZ, there can be no legal approval of A1139

The APHIS documentation shows that these GE potato lines offer no nutritional advantage, as there are non-GE potato varieties that are naturally low in the desired profiles. This demonstrates that there is no need for approval of the GE potatoes. Instead of approving this application, FSANZ could instead recommend non-GE potato varieties that have naturally-occurring low levels of compounds responsible for acrylamide production. They could also educate food businesses on storing and cooking procedures that minimize acrylamide production.. The FSANZ assessment is

compromised with respect to rigorous scientific procedure.

These GE potato lines cannot be approved for the human or animal consumption, without the provision of comprehensive information regarding compositional differences to their non-GE counterparts. Compositional analyses are very limited in that they can only assay for known compounds. Any novel compounds would not be detected in such analyses. FSANZ must provide evidence of safety, when eaten, in the lines that have significant variations in nutrients, or more importantly anti-nutrients. Anti nutrients such as glycoalkaloids can be highly toxic for consumers. The afore-mentioned studies have not been carried out and in their absence, there should be no legal approval of the A1139 application. SIGNED/YOURS

SINCERELY Hester Robson
