Datum der Inspektion/Date of Inspection  
(Tag Monat Jahr/day month year)

Die genannte Prüfeinrichtung befindet sich im nationalen GLP-Überwachungsverfahren und wird regelmäßig auf Einhaltung der GLP-Grundsätze überwacht.

The above mentioned test facility is included in the national GLP Compliance Programme and is inspected on a regular basis.

Auf der Grundlage des Inspektionsberichtes wird hiermit bestätigt, dass in dieser Prüfeinrichtung die oben genannten Prüfungen unter Einhaltung der GLP-Grundsätze durchgeführt werden können.

Based on the inspection report it can be confirmed, that this test facility is able to conduct the aforementioned studies in compliance with the Principles of GLP.

Study Director

Management

### **3.5 Good Laboratory Practice**

The study was performed in compliance with:

"Chemikaliengesetz" (Chemicals Act) of the Federal Republic of Germany, "Anhang 1" (Annex 1) dated July 25, 1994 („BGBI. I 1994“, pp. 1703), last revision dated June 27, 2002.

"OECD Principles of Good Laboratory Practice", as revised in 1997 [C(97)186/Final].

### **3.6 Guidelines**

This study followed the procedures indicated by the following internationally accepted guidelines and recommendations:

"Ninth Addendum to OECD Guidelines for Testing of Chemicals", Section 4, No. 471: "Bacterial Reverse Mutation Test", adopted July 21, 1997.

"Commission Directive 2000/32/EC, L1362000, Annex 4D", dated May 19, 2000.

### **3.7 Archiving**

RCC Cytotest Cell Research GmbH will archive the following data for 15 years:

Raw data, study plan, report, and a sample of the test item.

No data will be discarded without the sponsor's consent.

### **3.8 Deviations from the Study Plan**

There were no deviations from the study plan.

## 4 STATEMENT OF COMPLIANCE

Study Number: 1155101  
Test Item: Lyso-Phospholipase  
Study Director: Dipl. Biol. Andrea Sokolowski  
Title: Salmonella Typhimurium Reverse Mutation Assay  
with Lyso-Phospholipase

This study performed in the test facility of RCC Cytotest Cell Research GmbH was conducted in compliance with Good Laboratory Practice Regulations:

"Chemikaliengesetz" (Chemicals Act) of the Federal Republic of Germany, "Anhang 1" (Annex 1) dated July 25, 1994 („BGBI. I 1994“, pp. 1703), last revision dated June 27, 2002.

"OECD Principles of Good Laboratory Practice", as revised in 1997 [C(97)186/Final].

There were no circumstances that may have affected the quality or integrity of the study.

Study Director

## 5 STATEMENT OF QUALITY ASSURANCE UNIT

Study Number: 1155101  
Test Item: Lyso-Phospholipase  
Study Director: Dipl. Biol. Andrea Sokolowski  
Title: Salmonella Typhimurium Reverse Mutation Assay  
with Lyso-Phospholipase

The general facilities and activities of RCC Cytotest Cell Research GmbH are inspected periodically and the results are reported to the responsible person and the management.

Study procedures were inspected periodically. The study plan and this report were audited by the Quality Assurance Unit. The dates are given below.

| Phases and Dates of QAU Inspections/ Audits           |         |          | Dates of Reports to the Study Director and to Management |          |

| Process Inspection<br>(preparation of the test item): | January | 29, 2008 | January  | 29, 2008 |
| Report  | March   | 27, 2008 | March  | 27, 2008 |

This statement is to confirm that the present report reflects the raw data.

Head of Quality Assurance Unit

## 6 SUMMARY OF RESULTS

This study was performed to investigate the potential of Lyso-Phospholipase to induce gene mutations according to the plate incorporation test (experiment I) and the pre-incubation test (experiment II) using the *Salmonella typhimurium* strains TA 1535, TA 1537, TA 98, TA 100, and TA 102.

The assay was performed in two independent experiments both with and without liver microsomal activation. Each concentration, including the controls, was tested in triplicate. The test item was tested at the following concentrations:

Pre-Experiment/Experiment I: 3, 10; 33; 100; 333; 1000; 2500; and 5000 µg/plate

Experiment II: 33; 100; 333; 1000; 2500; and 5000 µg/plate

The plates incubated with the test item showed normal background growth up to 5000 µg/plate with and without S9 mix in all strains used.

No toxic effects, evident as a reduction in the number of revertants, occurred in the test groups with and without metabolic activation.

No substantial increase in revertant colony numbers of any of the five tester strains was observed following treatment with Lyso-Phospholipase at any dose level, neither in the presence nor absence of metabolic activation (S9 mix). There was also no tendency of higher mutation rates with increasing concentrations in the range below the generally acknowledged border of biological relevance.

Appropriate reference mutagens were used as positive controls and showed a distinct increase of induced revertant colonies.

### 6.1 Conclusion

In conclusion, it can be stated that during the described mutagenicity test and under the experimental conditions reported, the test item did not induce gene mutations by base pair changes or frameshifts in the genome of the strains used.

Therefore, Lyso-Phospholipase is considered to be non-mutagenic in this *Salmonella typhimurium* reverse mutation assay.

## 7 OBJECTIVE

### 7.1 Aims of the Study

The experiments were performed to assess the potential of the test item to induce gene mutations by means of two independent *Salmonella typhimurium* reverse mutation assays. Experiment I was performed as a plate incorporation assay. Since a negative result was obtained in this experiment, experiment II was performed as a pre-incubation assay.

### 7.2 Reasons for the Study

The most widely used assays for detecting gene mutations are those using bacteria (3). They are relatively simple and rapid to perform, and give reliable data on the ability of an agent to interact with DNA and produce mutations.

Reverse mutation assays determine the frequency with which an agent reverses or suppresses the effect of the forward mutation. The genetic target presented to an agent is therefore small, specific and selective. Several bacterial strains, or a single strain with multiple markers are necessary to overcome the effects of mutagen specificity. The reversion of bacteria from growth-dependence on a particular amino acid to growth in the absence of that amino acid (reversion from auxotrophy to prototrophy) is the most widely used marker.

The *Salmonella typhimurium* histidine (his) reversion system measures his<sup>-</sup> → his<sup>+</sup> reversions. The *S. typhimurium* strains are constructed to differentiate between base pair (TA 1535, TA 100, TA 102) and frameshift (TA 1537, TA 98) mutations.

According to the direct plate incorporation and the pre-incubation method the bacteria are exposed to the test item with and without metabolic activation and plated on selective medium. After a suitable period of incubation, revertant colonies are counted.

To establish a dose response effect at least six dose levels with adequately spaced concentrations were tested. The maximum dose level was 5000 µg/plate.

To validate the test, reference mutagens are tested in parallel to the test item.

## 8 MATERIALS AND METHODS

### 8.1 Test Item

Internal RCC-CCR Test Item Number: S 837411

**The test item and the information concerning the test item were provided by the sponsor.**

|                                      |   |
|--------------------------------------|---|
| Identity:                            | Lyso-Phospholipase  |
| Batch No.:                           | LP 07102 A3   |
| Aggregate state at room temperature: | Solid   |
| * Colour:                            | Pale brown  |
| Purity:                              | Not indicated by the sponsor  |
| Stability in solvent:                | Stable in water for approx.: 1 day at room temperature<br>5 days in refrigerator<br>1 year in freezer |
| Storage:                             | At room temperature, moisture protected   |
| Expiration Date:                     | November, 2009  |

On the day of the experiment, the test item Lyso-Phospholipase was dissolved in deionised water. The solvent was chosen because of its solubility properties and its relative nontoxicity to the bacteria (4).

No precipitation of the test item occurred up to the highest investigated dose.

---

\*as determined by RCC-CCR Laboratory Staff

## 8.2 Controls

### 8.2.1 Negative Controls

Concurrent untreated and solvent controls were performed.

### 8.2.2 Positive Control Substances

#### Without metabolic activation

|                |   |
|----------------|---|
| Strains:       | TA 1535, TA 100                               |

| Catalogue No.: | 820775  |
| Purity:        | > 99.0 %                                      |
| Dissolved in:  | water deionised                               |
| Concentration: | 3.0 µL/plate                                  |

#### With metabolic activation

|                |   |
|----------------|---|
| Strains:       | TA 1535, TA 1537, TA 98, TA 100, TA 102       |
| Name:          | 2-aminoanthracene, 2-AA                       |
| Supplier:      | SIGMA, D-82041 Deisenhofen                    |
| Catalogue No.: | A 1381  |
| Purity:        | 97.5 %  |
| Dissolved in:  | DMSO (purity >99 %, MERCK, D-64293 Darmstadt) |
| Concentration: | 2.5 µg/plate (10.0 µg/plate in TA 102)        |

The stability of the positive control substances in solution was unknown but a mutagenic response in the expected range is sufficient evidence of biological stability.

## 8.3 Test System

### 8.3.1 Characterisation of the *Salmonella typhimurium* Strains

The histidine dependent strains are derived from *S. typhimurium* strain LT2 through a mutation in the histidine locus. Additionally due to the "deep rough" (*rfa*<sup>-</sup>) mutation they possess a faulty lipopolysaccharide envelope which enables substances to penetrate the cell wall more easily. A further mutation (deletion of the *uvrB* gene) causes an inactivation of the excision repair system. The latter alteration also includes a deletion in the nitrate reductase and biotin genes. In the strains TA 98, TA 100, and TA 102 the R-factor plasmid pKM 101 carries *umu DC* analogous genes that are involved in error-prone repair and the ampicillin resistance marker. The strain TA 102 does not contain the *uvrB*<sup>-</sup>-mutation and is excision repair proficient. Additionally, TA 102 contains the multicopy plasmid pAQ1 carrying the *hisG428* mutation (ochre mutation in the *hisG* gene ) and a tetracycline resistance gene (5).

In summary, the mutations of the TA strains used in this study can be described as follows:

| Salmonella typhimurium |   |                             |
|------------------------|---|-----------------------------|
| Strains                | Genotype  | Type of mutations indicated |
| TA 1537                | his C 3076; <i>rfa</i> <sup>-</sup> ; <i>uvrB</i> <sup>-</sup>            | frame shift mutations       |
| TA 98                  | his D 3052; <i>rfa</i> <sup>-</sup> ; <i>uvrB</i> <sup>-</sup> ; R-factor | " "                         |
| TA 1535                | his G 46; <i>rfa</i> <sup>-</sup> ; <i>uvrB</i> <sup>-</sup>              | base-pair substitutions     |
| TA 102                 | his G 428; <i>rfa</i> <sup>-</sup> ; <i>uvrB</i> <sup>+</sup> ; R-factor  | " "                         |
| TA 100                 | his G 46; <i>rfa</i> <sup>-</sup> ; <i>uvrB</i> <sup>-</sup> ; R-factor   | " "                         |

Regular checking of the properties of the strains regarding the membrane permeability, ampicillin- and tetracycline-resistance as well as spontaneous mutation rates is performed in the laboratory of RCC Cytotest Cell Research GmbH according to B. Ames et al. (1) and D. Maron and B. Ames (5). In this way it was ensured that the experimental conditions set down by Ames were fulfilled.

The bacterial strains TA 1535, TA 1537, TA 98, TA 100, and TA 102 were obtained from Trinova Biochem GmbH (35394 Gießen, Germany).

### 8.3.2 Storage

The strain cultures were stored as stock cultures in ampoules with nutrient broth + 5 % DMSO (MERCK, D-64293 Darmstadt) in liquid nitrogen.

### 8.3.3 Precultures

From the thawed ampoules of the strains 0.5 mL bacterial suspension was transferred into 250 mL Erlenmeyer flasks containing 20 mL nutrient medium. A solution of 20 µL ampicillin (25 µg/mL) was added to the strains TA 98, TA 100, and TA 102. Additionally 20 µL tetracycline (2 µg/mL) was added to strain TA 102. This nutrient medium contains per litre:

8 g Merck Nutrient Broth (MERCK, D-64293 Darmstadt)  
5 g NaCl (MERCK, D-64293 Darmstadt)

The bacterial cultures were incubated in a shaking water bath for 4 hours at 37° C.

### 8.3.4 Selective Agar

The plates with the minimal agar were obtained from E. Merck, D-64293 Darmstadt.

### 8.3.5 Overlay Agar

The overlay agar contains per litre:

6.0 g MERCK Agar Agar\*  
6.0 g NaCl\*  
10.5 mg L-Histidine x HCl x H<sub>2</sub>O\*  
12.2 mg Biotin\*

\* (MERCK, D-64293 Darmstadt)

Sterilisations were performed at 121° C in an autoclave.

## 8.4 Mammalian Microsomal Fraction S9 Mix

The bacteria used in this assay do not possess the enzyme systems which, in mammals, are known to convert promutagens into active DNA damaging metabolites. In order to overcome this major drawback an exogenous metabolic system is added in form of mammalian microsome enzyme activation mixture.

### 8.4.1 S9 (Preparation by R C C - C C R)

Phenobarbital/β-Naphthoflavone induced rat liver S9 is used as the metabolic activation system. The S9 is prepared from 8 - 12 weeks old male Wistar Hanlbm rats, weight approx. 220 - 320 g induced by applications of 80 mg/kg b.w. Phenobarbital i.p. (Desitin; D-22335 Hamburg) and β-Naphthoflavone p.o. (Aldrich, D-89555 Steinheim) each on three consecutive days. The livers are prepared 24 hours after the last treatment. The S9 fractions are produced by dilution of the liver homogenate with a KCl solution (1+3) followed by centrifugation at 9000 g. Aliquots of the supernatant are frozen and stored in ampoules at -80° C. Small numbers of the ampoules can be kept at -20°C for up to one week. Each batch of S9 mix is routinely tested with 2-aminoanthracene as well as benzo(a)pyrene.

The protein concentration in the S9 preparation was 30.5 mg/mL (lot no. R 240807) in both experiments.

#### 8.4.2 S9 Mix

Before the experiment an appropriate quantity of S9 supernatant was thawed and mixed with S9 co-factor solution. The amount of S9 supernatant was 10% v/v in the S9 mix. Cofactors are added to the S9 mix to reach the following concentrations in the S9 mix:

8 mM MgCl<sub>2</sub>  
33 mM KCl  
5 mM Glucose-6-phosphate  
5 mM NADP

in 100 mM sodium-ortho-phosphate-buffer, pH 7.4.

During the experiment the S9 mix was stored in an ice bath. The S9 mix preparation was performed according to Ames et al.(1).

### 8.5 Pre-Experiment for Toxicity

To evaluate the toxicity of the test item a pre-experiment was performed with all strains used. Eight concentrations were tested for toxicity and mutation induction with each 3 plates. The experimental conditions in this pre-experiment were the same as described for the experiment I below (plate incorporation test).

Toxicity of the test item can be evident as a reduction in the number of spontaneous revertants or a clearing of the bacterial background lawn.

The pre-experiment is reported as main experiment I, since the following criteria are met:

Evaluable plates (>0 colonies) at five concentrations or more in all strains used.

### 8.6 Dose Selection

In the pre-experiment the concentration range of the test item was 3 – 5000 µg/plate. The pre-experiment is reported as experiment I. Since no toxic effects were observed 5000 µg/plate were chosen as maximal concentration.

The concentration range included two logarithmic decades. The following concentrations were tested:

33; 100; 333; 1000; 2500; and 5000 µg/plate

## 8.7 Experimental Performance

For each strain and dose level, including the controls three plates were used.

The following materials were mixed in a test tube and poured onto the selective agar plates:

- 100 µL Test solution at each dose level, solvent (negative control) or reference mutagen solution (positive control),
- 500 µL S9 mix (for test with metabolic activation) or S9 mix substitution buffer (for test without metabolic activation),
- 100 µL Bacteria suspension (cf. test system, pre-culture of the strains),
- 2000 µL Overlay agar

In the pre-incubation assay 100 µL test solution, 500 µL S9 mix / S9 mix substitution buffer and 100 µL bacterial suspension were mixed in a test tube and incubated at 37°C for 60 minutes. After pre-incubation 2.0 mL overlay agar (45° C) was added to each tube. The mixture was poured on minimal agar plates.

After solidification the plates were incubated upside down for at least 48 hours at 37° C in the dark (2).

## 8.8 Data Recording

The colonies were counted using the Petri Viewer Mk2 (Perceptive Instruments Ltd, Suffolk CB 7BN, UK) with the software program Ames Study Manager. The counter was connected to an IBM AT compatible PC with printer which printed out both, the individual and mean values of the plates for each concentration together with standard deviations and enhancement factors as compared to the spontaneous reversion rates (see tables of results). Due to air bubbles (might be caused by the test item) the colonies were partly counted manually.

## 8.9 Acceptability of the Assay

The *Salmonella typhimurium* reverse mutation assay is considered acceptable if it meets the following criteria:

- regular background growth in the negative and solvent control
- the spontaneous reversion rates in the negative and solvent control are in the range of our historical data
- the positive control substances should produce a significant increase in mutant colony frequencies

## **8.10 Evaluation of Results**

A test item is considered as a mutagen if a biologically relevant increase in the number of revertants exceeding the threshold of twice (strains TA 98, TA 100, and TA 102) or thrice (strains TA 1535 and TA 1537) the colony count of the corresponding solvent control is observed (3).

A dose dependent increase is considered biologically relevant if the threshold is exceeded at more than one concentration (2).

An increase exceeding the threshold at only one concentration is judged as biologically relevant if reproduced in an independent second experiment.

A dose dependent increase in the number of revertant colonies below the threshold is regarded as an indication of a mutagenic potential if reproduced in an independent second experiment. However, whenever the colony counts remain within the historical range of negative and solvent controls such an increase is not considered biologically relevant.

## **8.11 Biometry**

According to the OECD guideline 471, a statistical analysis of the data is not mandatory.

## 9 DISCUSSION OF RESULTS

The test item Lyso-Phospholipase was assessed for its potential to induce gene mutations according to the plate incorporation test (experiment I) and the pre-incubation test (experiment II) using *Salmonella typhimurium* strains TA 1535, TA 1537, TA 98, TA 100, and TA 102.

The assay was performed in two independent experiments both with and without liver microsomal activation. Each concentration and the controls, were tested in triplicate. The test item was tested at the following concentrations:

Pre-Experiment/Experiment I: 3, 10; 33; 100; 333; 1000; 2500; and 5000 µg/plate

Experiment II: 33; 100; 333; 1000; 2500; and 5000 µg/plate

The plates incubated with the test item showed normal background growth up to 5000 µg/plate with and without S9 mix in all strains used.

No toxic effects, evident as a reduction in the number of revertants, occurred in the test groups with and without metabolic activation.

No substantial increase in revertant colony numbers of any of the five tester strains was observed following treatment with Lyso-Phospholipase at any concentration level, neither in the presence nor absence of metabolic activation (S9 mix). There was also no tendency of higher mutation rates with increasing concentrations in the range below the generally acknowledged border of biological relevance.

In experiment II without metabolic activation, the data in solvent control of strain TA 1537 were slightly above our historical control range. Since this deviation is rather small, this effect is considered to be based upon biologically irrelevant fluctuations in the number of colonies.

Appropriate reference mutagens were used as positive controls. They showed a distinct increase in induced revertant colonies.

In conclusion, it can be stated that during the described mutagenicity test and under the experimental conditions reported, the test item did not induce gene mutations by base pair changes or frameshifts in the genome of the strains used.

Study Director

Management

### **3.5 Good Laboratory Practice**

The study was performed in compliance with:

"Chemikaliengesetz" (Chemicals Act) of the Federal Republic of Germany, "Anhang 1" (Annex 1), dated July 25, 1994 ("BGBl. I 1994", pp. 1703), last revision dated June 27, 2002.

"OECD Principles of Good Laboratory Practice", as revised in 1997 [C(97)186/Final].

### **3.6 Guidelines**

This study followed the procedures indicated by the following internationally accepted guidelines and recommendations:

Ninth Addendum to the OECD Guidelines for Testing of Chemicals, February 1998, adopted July 21, 1997, Guideline No. 473 "*In vitro* Mammalian Chromosome Aberration Test".

Commission Directive 2000/32/EC, L1362000, Annex 4A: "Mutagenicity – *In vitro* Mammalian Chromosome Aberration Test", dated May 19, 2000.

### **3.7 Archiving**

RCC Cytotest Cell Research GmbH will archive the following data for 15 years:

Raw data, study plan, report, and a sample of the test item.

Microscopic slides will be archived for at least 12 years.

No data will be discarded without the sponsor's consent.

### **3.8 Deviations from the Study Plan**

There were no deviations from the study plan.

## 4 STATEMENT OF COMPLIANCE

Study Number: 1155102

Test Item: Lyso-Phospholipase

Study Director:

Title: *In vitro* Chromosome Aberration Test  
in Chinese Hamster V79 Cells  
with Lyso-Phospholipase

This study performed in the test facility of RCC Cytotest Cell Research GmbH was conducted in compliance with Good Laboratory Practice Regulations:

"Chemikaliengesetz" (Chemicals Act) of the Federal Republic of Germany, "Anhang 1" (Annex 1), dated July 25, 1994 ("BGBl. I 1994", pp. 1703), last revision dated June 27, 2002.

"OECD Principles of Good Laboratory Practice", as revised in 1997 [C(97)186/Final].

There were no circumstances that may have affected the quality or integrity of the study.

Study Director

## 5 STATEMENT OF QUALITY ASSURANCE UNIT

Study Number: 1155102

Test Item: Lyso-Phospholipase

Study Director:

Title: *In vitro* Chromosome Aberration Test  
in Chinese Hamster V79 Cells  
with Lyso-Phospholipase

The general facilities and activities of RCC Cytotest Cell Research GmbH are inspected periodically and the results are reported to the responsible person and the Management.

Study procedures were inspected periodically. The study plan and this report were audited by the Quality Assurance Unit. The dates are given below.

| Phases and Dates of QAU Inspections/ Audits                                    |                  | Dates of Reports to the Study Director and to Management |

This statement is to confirm that the present report reflects the raw data.

Head of Quality Assurance Unit

## 6 SUMMARY OF RESULTS

The test item Lyso-Phospholipase, dissolved in deionised water, was assessed for its potential to induce structural chromosome aberrations in V79 cells of the Chinese hamster *in vitro* in two independent experiments. The following study design was performed:

|                      | Without S9 mix |         | With S9 mix   |
|----------------------|----------------|---------|---------------|
|                      | Exp. I         | Exp. II | Exp. I and II |
| Exposure period      | 4 hrs          | 18 hrs  | 4 hrs         |
| Recovery             | 14 hrs         | -       | 14 hrs        |
| Preparation interval | 18 hrs         | 18 hrs  | 18 hrs        |

In each experimental group two parallel cultures were set up. Per culture 100 metaphases were scored for structural chromosome aberrations.

The highest applied concentration in the pre-test on toxicity (5000 µg/mL) was chosen with respect to the current OECD Guideline 473.

Dose selection for the cytogenetic experiments was performed considering the toxicity data. The chosen treatment concentrations are described in chapter 8.6 (page 15). The scored experimental points and the results are summarised in Table 1 (page 23).

No toxic effects indicated by reduced mitotic indices and/or reduced cell numbers of below 50 % of control were observed after treatment up to the highest required test item concentration.

In both independent experiments, no biologically relevant increase in the number of cells carrying structural chromosomal aberrations was observed after treatment with the test item. However, in Experiment II in the presence of S9 mix a single significant increase (2.0 %) was observed but this value was clearly within the laboratory's historical control data range (0.0 – 4.0 % aberrant cells, excluding gaps) and is regarded as biologically irrelevant.

No relevant increase in the frequencies of polyploid metaphases was found after treatment with the test item as compared to the frequencies of the controls.

Appropriate mutagens were used as positive controls. They induced statistically significant increases ( $p < 0.05$ ) in cells with structural chromosome aberrations.

### 6.1 Conclusion

In conclusion, it can be stated that under the experimental conditions reported, the test item did not induce structural chromosome aberrations as determined by the chromosome aberration test in V79 cells (Chinese hamster cell line) *in vitro*.

Therefore, Lyso-Phospholipase is considered to be non-clastogenic in this chromosome aberration test with and without S9 mix when tested up to the highest required concentration.

## 7 INTRODUCTION

According to national and international acts chemicals have to be tested before introduction to the market for a possible hazard to humans and the environment. Genotoxicity studies provide important information for the assessment of the mutagenic potential of these substances (1, 4). The *in vitro* Chromosome Aberration Test performed in this study is an essential part of genotoxicity test batteries of substances.

This *in vitro* test is a test for the detection of structural chromosomal aberrations. Such aberrations are frequently lethal to the damaged cells (8, 10). However, cytogenetic damage in somatic cells is an indicator of a potential to induce subtler chromosomal damage that may be compatible with cell division. Similar damage induced in germ cells may lead to heritable cytogenetic abnormalities. Heritable cytogenetic abnormalities are known to have deleterious effects in man, e.g. induction of neoplastic events or birth defects. Also, chromosome abnormalities in somatic cells may become one of the reasons why a transformed cell population may develop into cancer.

Chromosome aberrations are generally scored in first post treatment mitoses. With the majority of chemical mutagens induced structural aberrations are of the chromatid type, but chromosome type aberrations also occur.

For treatment, cell populations should be in exponential growth to guarantee that there are cells in all stages of the cell cycle (i.e. an asynchronous population). Since the normal cell cycle time is 12 hours (see page 13) and the guidelines require fixation times of about 1.5-fold of the normal cell cycle, a fixation time of around 18 hours is appropriate. Because there may be chemicals which induce a very extensive mitotic delay at clastogenic concentrations or may be clastogenic only when cells have passed through more than one cell cycle after the beginning of treatment an additional later sampling time (28 hours) should be included (3). Due to the limited capacity of the V79 cells for metabolic activation of potential mutagens an exogenous metabolic activation system is included (7).

The frequency of polyploid and endoreduplicated cells should also be scored so that the level in control cultures can be monitored and their induction by the test item can be recorded especially when a late sampling time is used.

To validate the test reference mutagens were tested in parallel to the test item.

### 7.1 Aims of the Study

This *in vitro* test was performed to assess the potential of Lyo-Phospholipase to induce structural chromosome aberrations. Evaluation of cytogenetic damage induced in V79 cells (cell line from the lung of the Chinese Hamster) in the absence and the presence of metabolic activation was performed in two independent experiments at one preparation interval (18 hours) in Experiment I and at two preparation intervals (18 hours and 28 hours) in Experiment II.

## 8 MATERIALS AND METHODS

### 8.1 Test Item

Internal RCC-CCR Test Item Number: S 837411

**The test item and the information concerning the test item were provided by the sponsor.**

Identity: Lyso-Phospholipase

Batch No.: LP 07102 A3

Aggregate state at room temperature: Solid

\* Colour: Pale brown

Purity: Not indicated by the sponsor

Stability in solvent: Stable in water for approx.: 1 day at room temperature  
5 days in refrigerator  
1 year in freezer

Storage: At room temperature, moisture protected

Expiration Date: November 2009

On the day of the experiment (immediately before treatment), the test item was dissolved in deionised water. The final concentration of deionised water in the culture medium was 10 % (v/v). The solvent was chosen to its solubility properties and its relative non-toxicity to the cell cultures.

---

\*As determined by RCC-CCR Laboratory Staff

## 8.2 Controls

### 8.2.1 Solvent Controls

Concurrent solvent controls (deionised water) were performed.

### 8.2.2 Positive Control Substances

#### Without metabolic activation

Name: EMS; ethylmethane sulfonate  
Supplier: ACROS ORGANICS, 2440 Geel, Belgium  
Purity: ≥ 98 %  
Lot no.: A0236026  
Expiration Date: April 2008  
Dissolved in: Nutrient medium  
Final Concentration: 500 - 900 µg/mL (4.0 - 7.2 mM)

Solutions were prepared on the day of experiment. The stability of the positive control substance in solution was proven by the mutagenic response in the expected range.

#### With metabolic activation

Name: CPA; cyclophosphamide  
Supplier: Aldrich Chemie, 89555 Steinheim, Germany  
Purity: ≥ 98 %  
Lot no.: 075K1661  
Expiration Date: July 2009  
Dissolved in: Saline (0.9 % [w/v])  
Final Concentration: 1.4 - 2.0 µg/mL (5.0 - 7.0 µM)

The dilutions of the stock solutions were prepared on the day of experiment. The stability of CPA in solution at room temperature is good. At 25° C only 3.5 % of its potency is lost after 24 hours (6).

## 8.3 Test System

### 8.3.1 Reasons for the Choice of the Cell Line V79

The V79 cell line has been used successfully for many years in *in vitro* experiments. The high proliferation rate (doubling time of clone V79/D3 in stock cultures: 12 hours, determined on January 02, 2006) and a reasonable plating efficiency of untreated cells (as a rule more than 70 %) both necessary for the appropriate performance of the study, support the use of this cell line. The cells have a stable karyotype with a modal chromosome number of 22.

Lacking metabolic activities of cells under *in vitro* conditions are a disadvantage of tests with cell cultures as many chemicals only develop a mutagenic potential when they are metabolized by the mammalian organism. However, metabolic activation of chemicals can be achieved at least partially by supplementing the cell cultures with liver microsome preparations (S9 mix).

### 8.3.2 Cell Cultures

Large stocks of the V79 cell line (supplied by Laboratory for Mutagenicity Testing, LMP, Technical University Darmstadt, 64287 Darmstadt, Germany) were stored in liquid nitrogen in the cell bank of RCC Cytotest Cell Research GmbH allowing the repeated use of the same cell culture batch in experiments. Before freezing each batch was screened for mycoplasm contamination and checked for karyotype stability. Consequently, the parameters of the experiments remain similar because of standardized characteristics of the cells.

Thawed stock cultures were propagated at 37° C in 80 cm<sup>2</sup> plastic flasks (GREINER, 72632 Frickenhausen, Germany). About 5 x 10<sup>5</sup> cells per flask were seeded into 15 mL of MEM (Minimal Essential Medium; SEROMED; 12247 Berlin, Germany) supplemented with 10 % fetal calf serum (FCS; PAA Laboratories GmbH, 35091 Cölbe, Germany). The cells were sub-cultured twice weekly. The cell cultures were incubated at 37° C in a humidified atmosphere with 1.5 % carbon dioxide (98.5 % air).

## 8.4 Mammalian Microsomal Fraction S9 Mix

### 8.4.1 S9 (Preparation by RCC Cytotest Cell Research)

Phenobarbital/β-Naphthoflavone induced rat liver S9 was used as the metabolic activation system. The S9 was prepared from 8 - 12 weeks old male Wistar Hanlbm rats, weight approx. 220 - 320 g induced by applications of 80 mg/kg b.w. Phenobarbital i.p. (Desitin; 22335 Hamburg, Germany) and β-Naphthoflavone p.o. (Aldrich, 89555 Steinheim, Germany) each, on three consecutive days. The livers were prepared 24 hours after the last treatment.

The S9 fractions were produced by dilution of the liver homogenate with a KCl solution (1:3 parts) followed by centrifugation at 9000 g. Aliquots of the supernatant were frozen and stored in ampoules at -80° C. Small numbers of the ampoules were kept at -20°C for up to one week.

The protein concentration was 28.3 mg/mL (Lot no. 191007) in the pre-test and in Experiment I and 31.0 mg/mL (Lot no. 150208) in Experiment II.

#### 8.4.2 S9 Mix

An appropriate quantity of S9 supernatant was thawed and mixed with S9 cofactor solution to result in a final protein concentration of 0.75 mg/mL in the cultures. Cofactors were added to the S9 mix to reach the following concentrations:

8 mM MgCl<sub>2</sub>  
33 mM KCl  
5 mM glucose-6-phosphate  
4 mM NADP

in 100 mM sodium-ortho-phosphate-buffer, pH 7.4.

During the experiment the S9 mix was stored in an ice bath. The S9 mix preparation was performed according to Ames et al. (1).

#### 8.5 Range-finder

A pre-test on cell growth inhibition with 4 hours and 24 hours treatment was performed in order to determine the toxicity of the test item (2). Cytotoxicity was determined using concentrations separated by no more than a factor of 2 - √10. The general experimental conditions in this pre-test were the same as described below for the cytogenetic main experiment. The following method was used:

In a quantitative assessment, exponentially growing cell cultures (seeding about 40,000 cells/ slide, with regard to the culture time 48 hours) were treated with the test item for simulating the conditions of the main experiment. A qualitative evaluation of cell number and cell morphology was made 4 hours and 24 hours after start of treatment. The cells were stained 24 hours after start of treatment. Using a 400-fold microscopic magnification the cells were counted in 10 coordinate defined fields of the slides (2 slides per treatment group). The cell number of the treatment groups is given as % cells in relation to the control.

## 8.6 Dose Selection

The highest concentration used in the cytogenetic experiments was chosen with regard to the current OECD Guideline for *in vitro* mammalian cytogenetic tests requesting for the top concentration clear toxicity with reduced cell numbers or mitotic indices below 50 % of control, whichever is the lowest concentration, and/or the occurrence of precipitation. In case of non-toxicity the maximum concentration should be 5 mg/mL, 5 µL/mL or 10 mM, whichever is the lowest, if formulation in an appropriate solvent is possible.

In the pre-test 5000 µg/mL of Lyo-Phospholipase was applied as top concentration for treatment of the cultures. Test item concentrations between 39.1 and 5000 µg/mL (with and without S9 mix) were chosen for the evaluation of cytotoxicity.

Using reduced cell numbers as an indicator for toxicity in the pre-test, no cytotoxicity indicated by reduced cell numbers was observed up to the highest test item concentration. Considering the toxicity data of the pre-test, 5000 µg/mL (with and without S9 mix) was chosen as top concentration in Experiment I.

Dose selection of Experiment II was also influenced by test item toxicity. In the range finding experiment no reduced cell numbers were observed after 24 hours exposure up to the highest concentration. Therefore, 5000 µg/mL was chosen as top treatment concentration for continuous exposure in the absence of S9 mix. In the presence of S9 mix 5000 µg/mL was chosen as top treatment concentration with respect to the results obtained in Experiment I.

### Doses applied in the Chromosome aberration test with Lyo-Phospholipase

| Preparation interval  | Exposure period | Exp. | Concentration in µg/mL |       |       |               |               |               |
|-----------------------|-----------------|------|------------------------|-------|-------|---------------|---------------|---------------|
| <b>Without S9 mix</b> |                 |      |                        |       |       |               |               |               |
| 18 hrs                | 4 hrs           | I    | 156.3                  | 312.5 | 625.0 | <b>1250.0</b> | <b>2500.0</b> | <b>5000.0</b> |
| 18 hrs                | 18 hrs          | II   | 156.3                  | 312.5 | 625.0 | <b>1250.0</b> | <b>2500.0</b> | <b>5000.0</b> |
| <b>With S9 mix</b>    |                 |      |                        |       |       |               |               |               |
| 18 hrs                | 4 hrs           | I    | 156.3                  | 312.5 | 625.0 | <b>1250.0</b> | <b>2500.0</b> | <b>5000.0</b> |

Scored experimental points are shown in bold characters

P Precipitation occurred 4 hours after start of treatment

## 8.7 Experimental Performance

### 8.7.1 Seeding of the Cultures

Exponentially growing stock cultures more than 50 % confluent were treated with trypsin-EDTA-solution at 37° C for approx. 5 minutes. Then the enzymatic treatment was stopped by adding complete culture medium and a single cell suspension was prepared. The trypsin concentration for all sub-culturing steps was 0.5 % (w/v) in Ca-Mg-free salt solution (Invitrogen GIBCO, 76131 Karlsruhe, Germany).

Prior to the trypsin treatment the cells were rinsed with Ca-Mg-free salt solution. The Ca-Mg-free salt solution was composed as follows (per litre):

|                                  |         |
|----------------------------------|---------|
| NaCl                             | 8000 mg |
| KCl                              | 200 mg  |
| KH <sub>2</sub> PO <sub>4</sub>  | 200 mg  |
| Na <sub>2</sub> HP0 <sub>4</sub> | 150 mg  |

The cells were seeded into Quadriperm dishes (Heraeus, 63450 Hanau, Germany) that contained microscopic slides (at least 2 chambers per dish and test group). In each chamber 1 x 10<sup>4</sup> - 6 x 10<sup>4</sup> cells were seeded with regard to the preparation time. The medium was MEM with 10 % FCS (complete medium).

### 8.7.2 Treatment

#### Exposure period 4 hours

The culture medium of exponentially growing cell cultures was replaced with serum-free medium (for treatment with S9 mix) or complete medium (for treatment without S9 mix) with 10 % FCS (v/v), containing the test item. For the treatment with metabolic activation 50 µL S9 mix per mL medium were used. Concurrent solvent and positive controls were performed. After 4 hours the cultures were washed twice with "Saline G" and then the cells were cultured in complete medium for the remaining culture time.

The "Saline G" solution was composed as follows (per litre):

|  |         |
|--|---------|
| NaCl   | 8000 mg |
| KCl  | 400 mg  |
| Glucose x H <sub>2</sub> O                           | 1100 mg |
| Na <sub>2</sub> HP0 <sub>4</sub> x 7H <sub>2</sub> O | 290 mg  |
| KH <sub>2</sub> PO <sub>4</sub>                      | 150 mg  |

pH was adjusted to 7.2

All cultures were incubated at 37° C in a humidified atmosphere with 1.5 % CO<sub>2</sub> (98.5 % air).

### **8.7.3 Preparation of the Cultures**

Colcemid was added (0.2 µg/mL culture medium) to the cultures 15.5 hours after the start of the treatment. The cells on the slides were treated 2.5 hours later, in the chambers with hypotonic solution (0.4 % KCl) for 20 min at 37° C. After incubation in the hypotonic solution the cells were fixed with a mixture of methanol and glacial acetic acid (3:1 parts, respectively). Per experiment two slides per group were prepared. After preparation the cells were stained with Giemsa (E. Merck, 64293 Darmstadt, Germany).

### **8.7.4 Evaluation of Cell Numbers**

For evaluation of cytotoxicity indicated by reduced cell numbers two additional cultures per test item and solvent control group, not treated with colcemid, were set up in parallel. These cultures were stained after 18 hours, in order to determine microscopically the cell number within 10 defined fields per coded slide. The cell number of the treatment groups is given in percentage compared to the respective solvent control.

### **8.7.5 Analysis of Metaphase Cells**

Evaluation of the cultures was performed (according to standard protocol of the "Arbeitsgruppe der Industrie, Cytogenetik" [5]) using NIKON microscopes with 100x oil immersion objectives. Breaks, fragments, deletions, exchanges, and chromosome disintegrations were recorded as structural chromosome aberrations. Gaps were recorded as well but not included in the calculation of the aberration rates. 100 well spread metaphases per culture were scored for cytogenetic damage on coded slides.

Only metaphases with characteristic chromosome numbers of  $22 \pm 1$  were included in the analysis. To describe a cytotoxic effect the mitotic index (% cells in mitosis) was determined. In addition, the number of polyploid cells in 500 metaphases per culture was determined (% polyploid metaphases; in the case of this aneuploid cell line polyploid means a near tetraploid karyotype).

## 8.8 Data Recording

The data generated were recorded in the raw data file. The results are presented in tabular form, including experimental groups with the test item, solvent, and positive controls.

## 8.9 Acceptability of the Test

The chromosome aberration test performed in our laboratory is considered acceptable if it meets the following criteria:

- a) The number of structural aberrations found in the solvent controls falls within the range of the laboratory's historical control data range: 0.0 - 4.0 % aberrant cells, excluding gaps.
- b) The positive control substances should produce significant increases in the number of cells with structural chromosome aberrations, which are within the range of the laboratory's historical control data:

| Test group<br>Final concentration | Aberrant cells in %<br>(excl. gaps)<br>range | Test group<br>Final concentration | Aberrant cells in %<br>(excl. gaps)<br>range |
|-----------------------------------|--|-----------------------------------|--|
| <b>Without S9 mix</b>             |  | <b>With S9 mix</b>                |  |
| EMS 200 – 900 µg/mL               | 7.5 - 68.0 %                                 | CPA 1.0 – 2.0 µg/mL               | 6.5 - 100.0 %                                |

## 8.10 Evaluation of Results

A test item is classified as non-clastogenic if:

- the number of induced structural chromosome aberrations in all scored dose groups is in the range of the laboratory's historical control data range (0.0 - 4.0 % aberrant cells, excluding gaps).

and/or

- no significant increase of the number of structural chromosome aberrations is observed.

A test item is classified as clastogenic if:

- the number of induced structural chromosome aberrations is not in the range of the laboratory's historical control data range (0.0 - 4.0 % aberrant cells, excluding gaps).

and

- either a concentration-related or a significant increase of the number of structural chromosome aberrations is observed.

Statistical significance was confirmed by means of the Fisher's exact test (9) ( $p < 0.05$ ). However, both biological and statistical significance should be considered together. If the criteria mentioned above for the test item are not clearly met, the classification with regard to the historical data and the biological relevance is discussed and/or a confirmatory experiment is performed.

Although the inclusion of the structural chromosome aberrations is the purpose of this study, it is important to include the polyploids and endoreduplications. The following criterion is valid:

A test item can be classified as aneugenic if:

- the number of induced numerical aberrations is not in the range of the laboratory's historical control data range (0.0 – 5.2 % polyploid cells).

## 9 RESULTS AND DISCUSSION

The test item Lyso-Phospholipase, dissolved in deionised water, was assessed for its potential to induce structural chromosome aberrations in V79 cells of the Chinese hamster *in vitro* in the absence and the presence of metabolic activation by S9 mix.

Two independent experiments were performed. In Experiment I, the exposure period was 4 hours with and without metabolic activation. In Experiment II the exposure period was 4 hours with S9 mix and 18 hours without S9 mix. The chromosomes were prepared 18 hours after start of treatment with the test item.

In each experimental group two parallel cultures were set up. Per culture 100 metaphases were scored for structural chromosome aberrations.

In a range finding pre-test on toxicity cell numbers were scored 24 hours after start of treatment as an indicator for cytotoxicity. Concentrations between 39.1 and 5000 µg/mL were applied. No toxic effects were observed up to the highest required concentration in the absence and presence of S9 mix (see Table 2, page 24). Neither precipitation in culture medium nor relevant influence of the test item on the pH value or osmolarity was observed (solvent control 300 mOsm, pH 7.3 versus 307 mOsm and pH 7.3 at 5000 µg/mL).

In both independent experiments no precipitation of the test item in culture medium was observed.

In this study, neither reduced mitotic indices nor reduced cell numbers could be observed up to the highest required concentration of the test item (see Table 3, 4, and 7, pages 25, 26, and 29).

In both experiments in the absence and presence of S9 mix, a no biologically relevant increase in the number of cells carrying structural chromosome aberrations was observed (see Table 5 – 6 and Table 8 – 9, pages 27, 28, 30, and 31). The aberration rates of the cells after treatment with the test item (0.0 - 2.0 % aberrant cells, excluding gaps) were within the range of the solvent control values (0.0 - 2.0 % aberrant cells, excluding gaps) and within the range of the laboratory's historical control data range (0.0 - 4.0 % aberrant cells, excluding gaps). A single significant increase was observed in Experiment II in the presence of S9 mix after treatment with 5000 µg/mL (see Table 9 and 11, pages 31 and 32). Although this increase of 2.0 % aberrant cells was statistically significant compared to the low response (0.0 % aberrant cells) in the solvent control data, this response is within the historical control data range (0.0 - 4.0 % aberrant cells). Therefore, this observation has to be regarded as biologically irrelevant.

Table 4 and 7, pages 26 and 29, show the occurrence of polyploid metaphases. In both experiments, no biologically relevant increase in the rate of polyploid metaphases was found after treatment with the test item (1.2 - 3.5 %) as compared to the rates of the solvent controls (1.8 - 3.7 %).

In both experiments, either EMS (500 or 900 µg/mL) or CPA (1.4 or 2.0 µg/mL) were used as positive controls and showed distinct increases in the number of cells with structural chromosome aberrations.

In conclusion, it can be stated that under the experimental conditions reported, the test item Lyo-Phospholipase did not induce structural chromosome aberrations in V79 cells (Chinese hamster cell line) when tested up to the highest required concentration.

## 12.2 Pre-Test on Toxicity

In the pre-test the toxicity of the test item was examined using the determination of the cell number. Cell numbers of two cultures (10 coordinate defined fields per culture) were determined for each experimental group.

Table 2: Cytotoxicity of Lyo-Phospholipase to cultures of Chinese hamster cell line V79

## 12.3 Experiments I and II: Determination of Toxicity

The toxicity of the test item was examined using the determination of the cell number. Cell numbers of two cultures (10 coordinate defined fields per culture) were determined for each experimental group, except the positive control.

Table 3: Number of cells in % of solvent control

\* The number of polyploid cells was determined of each test group in a sample of 500 cells per culture

\*\* The mitotic index was determined in a sample of 1000 cells per culture of each test group in %

\*\*\* For the positive control groups and the test item groups, the relative values of the mitotic index are related to the solvent controls

\* The number of polyploid cells was determined of each test group in a sample of 500 cells per culture

\*\* The mitotic index was determined in a sample of 1000 cells per culture of each test group in %

\*\*\* For the positive control groups and the test item groups, the relative values of the mitotic index are related to the solvent controls

\* Inclusive cells carrying exchanges

**Abbreviations**

g = gap, ig = iso-gap (gaps are achromatic lesions of chromatid or chromosome type where no or only a minimal misalignment of chromosomal material is visible), b = break, ib = iso-break, f = fragment, if = iso-fragment, d = deletion, id = iso-deletion, ma = multiple aberration (= more than 4 events in one cell [excluding gaps]), ex = chromatid type exchange, cx = chromosome type exchange, cd = chromosomal disintegration (= pulverization)

## 12.6 Biometry

Statistical significance at the five per cent level ( $p < 0.05$ ) was scored by means of the Fisher's exact test. Evaluation was performed only for cells carrying aberrations excluding gaps.

n.c. Not calculated as the aberration rate is equal or lower than the corresponding control rate

<sup>s</sup> Aberration rate is statistically significant higher than the control rate

## 13 ANNEX II

### 13.1 Chromosome Aberrations: Classification and Criteria

#### 1. Gaps

Gaps are small areas of the chromosome, which are unstained. The chromatids remain aligned as normal and the gap does not extend along the chromatid for a distance greater than the width of a chromatid. If the gap occurs on one chromatid only it is a chromatid gap (g).

#### 2. Chromatid Breaks

Chromatid breaks (b) vary in appearance. The chromatid may remain aligned but show a gap which is too large to classify as a gap. Alternatively, the chromatid may be broken so that the broken fragment is displaced. In some cases, the fragment is not seen at all. A chromatid fragment (f) should be scored if the chromosome of origin cannot be identified. In addition, deletions can occur as a result of a break. The missing terminal end of a chromatid in the assessed metaphase is classified as deletion (d).

#### 3. Chromosome Breaks

Chromosome breaks (ib) are breaks in both chromatids of the chromosome. A fragment with two chromatids is formed and this may be displaced by varying degrees. Breaks are distinguished from gaps by the size of the unstained region. A chromosome break is scored if the fragment is associated with a chromosome from which it was probably derived. However, fragments are often seen in isolation and are then scored as chromatid fragments (if). In addition, isodeletions can occur as a result of an isobreak. The missing terminal end of a chromosome in the assessed metaphase is classified as isodeletion (id).

#### 4. Exchanges

Exchanges are formed by faulty rejoining of broken chromosomes and may be of the chromosome or chromatid type. Chromatid exchanges (ex) have numerous different forms but are generally not further classified. Where multiple exchanges have occurred each exchange point is counted as one chromatid exchange. Chromosome exchanges (cx) generally appear as either a dicentric or a ring form, either of which can be associated with a fragment, which if possible should be scored as part of the exchange.

#### 5. Multiple Aberrations

If many aberrations are present in one metaphase, the exact details may not be scorable. This is particularly the case when chromosome pulverisation (cd) occurs. If the number of aberrations is greater than 4 then the cell is classified as multiple aberrant (ma).

#### 6. Chromosome Number

If the chromosome (centromere) number is  $22 \pm 1$  then it is classified as a diploid cell and scored for aberrations. If less than  $22 \pm 1$  chromosomes are counted then the cell is ignored under the assumption, that some chromosomes may have been lost for technical reasons. If greater than  $22 \pm 1$  chromosomes are scored then the count is recorded and the cell classified as an aneuploid cell. If multiple copies of the haploid chromosome number (other than diploid) are scored then the count is recorded and the cell classified as polyploid. If the chromosomes are arranged in closely apposed pairs, i.e. 4 chromatids instead of 2, the cell is scored as endoreduplicated (e).

## 14 ANNEX III

### 14.1 Historical laboratory control data

#### 14.1.1 Percentage of aberrant cells in Chinese hamster V79 cell cultures (2005 to 2006)

## Addendum to Annex 17 (90 days tox study)

AB Enzymes went back to Harlan Laboratories Ltd that conducted the 90 day oral toxicity study, expressing French ANSES concern and its request for further raw data on e.g. individual water consumption data, urinary ionograms or any other data that could substantiate this increase.

The report was reviewed by Dr Braun (study director), specifically the clinical biochemistry, the urinalysis and the histopathology. Harlan Laboratories' conclusions were the following:

- Variations of blood sodium are in the range of the control historical values

The control males had a mean sodium level of 143.4 mmol/l, which was nearly identical with the mean value of the historical control data (143.7 mmol/l).

Although the test item-treated males showed statistically significant increases in the sodium level, the historical control data revealed a 'normal' range for sodium from 138.5 to 149.2 mmol/l.

All females had slightly low sodium levels and although the high dose females had statistically significant differences they were well with the ranges of the historical control values.

- Studies and reports have been conducted using internationally agreed protocols as described in OECD Guideline 408

In compliance with EFSA and ANSES Guidance, the most up-to-date edition of the above mentioned Guidelines have been followed.

Although urinary ionograms are well suited for quantifying various fractions within the urine, these parameters, as well as water consumption, are not required by the regulatory guidelines and hence, one would be unlikely to include them in a standard study.

- These isolated findings have no impact on the overall meaning of the study

The urinalysis values that were analyzed did not show any abnormalities and the pathology was unremarkable.

The absence of any values that exceeded the ranges of the historical control values confirms that although these may actually be secondary effects of the test item administration, these isolated findings are not indicative of any adverse change and hence did not affect the NOEL or NOAEL.

Those conclusions were endorsed by the French ANSES, as shown in its opinion, dated 5 July 2013.

## GOOD LABORATORY PRACTICE

## STATEMENT OF COMPLIANCE

Harlan Laboratories Study: B99180  
Test Item: Lyso-Phospholipase  
Study Director:  
Study Title: 90-Day Oral (Gavage) Toxicity Study in the Wistar Rat

This study has been performed in compliance with the:

Swiss Ordinance relating to Good Laboratory Practice adopted May 18<sup>th</sup>, 2005 [RS 813.112.1]. This Ordinance is based on the OECD Principles of Good Laboratory Practice, as revised in 1997 and adopted on November 26<sup>th</sup>, 1997 by decision of the OECD Council [C (97)186/Final].

These principles are compatible with Good Laboratory Practice regulations specified by regulatory authorities throughout the European Community, the United States (EPA and FDA), and Japan (MHLW, MAFF and METI).

There were no circumstances that may have affected the quality or integrity of the data.

Study Director:

## QUALITY ASSURANCE GLP STATEMENT

Harlan Laboratories Ltd., Zelgliweg 1, 4452 Itingen / Switzerland

Harlan Laboratories Study: B99180  
Test Item: Lyso-Phospholipase  
Study Director:  
Study Title: 90-Day Oral (Gavage) Toxicity Study in the Wistar Rat

The general facilities and activities are inspected at least once yearly and the results are reported to the responsible person and the management.

Study procedures were periodically inspected. The study plan and this report were audited by the quality assurance. The dates are given below.

| Dates and Types of QA Inspections |  | Dates of Reports to the Study Director and Test Facility Management |
|-----------------------------------|--|---|
| 04 Sep 2008                       | Study plan   | 04 Sep 2008   |
| 01 Oct 2008                       | Study-based (animal delivery, randomization)                       | 01 Oct 2008   |
| 08 Oct 2008                       | Study-based (test item, dose preparation, treatment, body weights) | 08 Oct 2008   |

| Experimental Completion Date: | 28-May-2009  |

## **Accreditation**

"Harlan Laboratories Ltd." is accredited as a test laboratory for analysis in the fields of clinical chemistry, hematology, blood-coagulation and urine diagnostics in accordance with the Standard ISO/IEC 17025 under accreditation number STS 085 by the Swiss Accreditation Service.

## **Data Requirements / Test Guidelines**

This study followed the procedures indicated by the following internationally accepted guidelines and recommendations:

- "Repeated Dose 90-Day Oral Toxicity Study in Rodents", OECD Guidelines for the testing of Chemicals, Section 4, Health Effects, Number 408, 21 September 1998.
- Directive 96/54/EC, B. 26. "Subchronic Oral Toxicity", 30 September 1996, including Additional Testing for Neurotoxicity.

## **Animal Welfare**

This study was performed in an AAALAC-accredited laboratory in accordance with the Swiss Animal Protection Law under license no. 35.

## **Archiving**

Harlan Laboratories Ltd. (4452 Itingen / Switzerland) will retain the study plan, raw data, sample of test item, specimens (as long as the quality permits evaluation), and the final report of the present study for at least ten years.

No data will be discarded without the Sponsor's written consent.

Frozen samples will be discarded three months after the final report has been issued, transferred to a GLP archive at additional costs, or returned to the Sponsor.

## 1 SUMMARY

### General

In this subchronic toxicity study, Lysophospholipase was administered daily by oral gavage to SPF-bred Wistar rats of both sexes at dose levels of 100, 300 and 1000 mg/kg body weight/day for a period of 13 weeks. A control group was treated similarly with the vehicle, bidistilled water, only.

The groups comprised 10 animals per sex, which were sacrificed after 13 weeks of treatment.

Clinical signs, detailed behavioural observations, food consumption and body weights were recorded periodically during the acclimatization and treatment periods. Ophthalmoscopic examinations were performed during the acclimatization and at the end of the treatment period. Functional observational battery, locomotor activity and grip strength were performed during week 13.

At the end of the dosing period, blood samples were withdrawn for hematology and plasma chemistry analyses. Urine samples were collected for urinalyses. All animals were killed, necropsied and examined *post mortem*. Histological examinations were performed on organs and tissues from all control and high dose animals, and all gross lesions from all animals.

### Mortality / Viability

All animals survived until scheduled necropsy.

### Clinical Signs

No clinical signs of toxicological relevance were noted during daily observations in males and females at all dose levels.

### Detailed Behavioural Observations

No clinical signs were recorded during the weekly detailed behavioral observations (weeks 1-12).

### Functional Observational Battery

No clinical signs were recorded during the functional observational battery (week 13).

### Grip Strength

No test item-related changes were noted in fore- and hind limb grip strength in male and female rats at any dose level.

## **Locomotor Activity**

The mean locomotor activity of males and females was not affected by the treatment with the test item.

## **Food Consumption**

A slight trend to reduced mean daily- and relative food consumption was noted in test item-treated animals of both sexes at all dose levels during the treatment period. Although these changes in mean daily- and relative food consumption were not accompanied by changes in body weight development of test item-treated animals, these findings were considered to be related to the treatment with the test item.

## **Body Weights**

The mean body weight development in control and test item-treated animals of both sexes was comparable at any dose level during the treatment period.

## **Ophthalmoscopic Examinations**

Typical background findings (corneal opacity, persistent hyaloid vessel in vitreous body, persistent pupillary membrane) were noted without relationship to dose or treatment.

## **Clinical Laboratory Investigations**

### **Hematology**

After the 13-week treatment period, no test item-related changes of toxicological relevance were noted in hematology parameters in rats of both sexes at any dose level.

### **Clinical Biochemistry**

After the 13-week treatment period, no test item-related changes of toxicological relevance were noted in clinical biochemistry parameters in rats of both sexes at any dose level.

### **Urinalysis**

After the 13-week treatment period, no test item-related changes of toxicological relevance were noted in the urinalysis in males and females at any dose level.

### **Organ Weights**

There were no differences indicating an effect of the test item. A few statistically significant deviations in average organ weights at the end of the treatment period were considered to be incidental, reflecting the usual individual variability.

### **Macroscopic / Microscopic Findings**

At necropsy, performed at the end of the treatment period, no test item-related macroscopic findings were recorded.

The test item, Lyso-Phospholipase produced no histological evidence of toxicological properties in the organs and tissues examined.

## **2 PURPOSE**

The purpose of this study was to assess the toxicity of Lyso-Phospholipase when administered to Wistar rats by oral gavage for a period of at least 90 days.

This study should provide a rational basis for toxicological risk assessment in man.

### **3 MATERIALS AND METHODS**

#### **3.1 Test System**

|  |  |
|--|--|
| Animals:                                   | Rat, HanRcc: WIST(SPF)   |
| Rationale:                                 | Recognized by international guidelines as a recommended test system.   |

| Number of Animals:                         | Group 1: 10 males and 10 females<br>Group 2: 10 males and 10 females<br>Group 3: 10 males and 10 females<br>Group 4: 10 males and 10 females |
| Total Number of Animals Used:              | 40 males and 40 females  |
| Total Number of Animals Ordered:           | 41 males and 41 females  |
| Age (at Delivery):                         | Approximately 7 weeks  |
| Body Weight Range<br>(at Acclimatization): | Males: 182.0 to 203.9 g<br>Females: 138.2 to 162.4 g   |
| Identification:                            | Acclimatization: Cage card and tail mark (later ear tattoo)<br>Treatment: Cage card and individual ear tattoo                                |
| Randomization:                             | Computer-generated random algorithm.   |
| Acclimatization:                           | Under test conditions after health examination. Only animals without any visible signs of illness were used for the study.                   |

### 3.2 Allocation

The group identification and animal numbers assigned to treatment are stated in the following table:

| Allocation and Dose Levels |   | Group 1 control* | Group 2 | Group 3 | Group 4 |
|----------------------------|---|------------------|---------|---------|---------|
| mg/kg bw/day               |   | 0                | 100     | 300     | 1000    |
| Males                      | A | 1 - 10           | 11 - 20 | 21 - 30 | 31 - 40 |
| Females                    | A | 41 - 50          | 51 - 60 | 61 - 70 | 71 - 80 |

\* Control animals were treated with the vehicle, bidistilled water, only  
A Main study animals

### 3.3 Husbandry

|                        |   |
|------------------------|---|
| Room Numbers, Itingen: | 136   |
| Conditions:            | Standard laboratory conditions. Air-conditioned with 10 - 15 air changes per hour, continuously monitored environmental conditions (temp. range: $22 \pm 3$ °C; relative humidity range: 30 - 70%). Values outside of these ranges occasionally occurred, usually following room cleaning, and are considered not to have any influence on the study. Therefore, these data are not reported but are retained at Harlan Laboratories Ltd.. There was 12-hour fluorescent light/12-hour dark cycle with music during the light period. |
| Accommodation:         | In groups of five in Makrolon type-4 cages with wire mesh tops and sterilized standard softwood bedding ('Lignocel' Schill AG, 4132 Muttenz / Switzerland).   |
| Diet:                  | Pelleted standard Kliba Nafag 3433 (batch no. 44/08) rat maintenance diet (Provimi Kliba SA, 4303 Kaiseraugst / Switzerland) was available <i>ad libitum</i> . The feed batch was analyzed for contaminants. Results of representative analyses for contaminants are included in Appendix I on p. <a href="#">317</a> .   |
| Water:                 | Community tap-water from Itingen was available <i>ad libitum</i> in water bottles. Results of bacteriological assay, chemical and contaminant analyses of representative samples are included in Appendix II on p. <a href="#">320</a> .  |

### **3.4 Test Item / Vehicle**

Data as supplied by the Sponsor.

#### **3.4.1 Test Item**

|  |   |
|--|---|
| Identification:                        | Lyso-Phospholipase  |
| Description:                           | Solid   |
| Batch Number:                          | LPL-LF 07102 A3   |
| Purity:                                | Considered to be 100%   |
| Dry Matter:                            | 96.3%   |
| Ash:                                   | 0.8%  |
| Fat:                                   | 0.4%  |
| Carbohydrates:                         | 28.8%   |
| Total Protein (according to Kjeldahl): | 66.3% (= 663 mg/g substance)  |
| Lyso-Phospholipase Protein:            | 44.22 mg/g substance (= 6.67% of total protein)   |
| Expiry Date (Retest Date):             | 30-Nov-2009   |
| Storage Conditions:                    | At room temperature (15-25 °C) away from moisture and away from direct sunlight.  |
| Safety Precautions:                    | Routine hygienic procedures (gloves, goggles, face mask). May cause sensitization by inhalation and skin contact. Do not breathe dust. Do not breathe spray. Avoid contact with skin. |

#### **3.4.2 Vehicle and Control Item**

|                 |                   |
|-----------------|-------------------|
| Identification: | Bidistilled water |
|-----------------|-------------------|

### **3.5 Dose Formulations**

The dose formulations were prepared weekly.

Lyso-Phospholipase was weighed into a glass beaker on a tared Mettler balance and the vehicle, bidistilled water, was added to give the appropriate final concentration of the test item in the suspension. The mixtures were prepared using a magnetic stirrer.

Homogeneity of the test item in the vehicle was maintained during the daily administration period using a magnetic stirrer.

### 3.5.1 Stability and Storage of Dose Formulations

|                                 |   |
|---------------------------------|---|
| Stability of Dose Formulations: | 7 days based upon the results of stability analyses performed during a non-GLP dose range-finding study (RCC study no. B99178). |
| Storage of Dose Formulations    | In the refrigerator (2-8 °C) in glass beakers.  |

### 3.5.2 Analysis of Dose Formulations

Dose levels were in terms of test item as supplied unless otherwise stated by the Sponsor.

- Concentration, homogeneity and stability of dose formulations were determined by the Study Scientist (or his staff) according a photometric assay using BCA Total Protein Determination (08 Oct 2008) and thereafter using colourimetric enzymatic assay for Lyso-Phospholipase provided by the Sponsor and previously adapted at the Harlan Laboratories Ltd. (non-GLP dose range-finding study, RCC study no. B99178). The assay was based on the determination of free fatty acids following hydrolysis of Lyso-Phosphatidylcholine by Lyso-Phospholipase. The free fatty acids were determined using a "Free Fatty Acids Half Micro Test" (Roche, Switzerland).

Concentration, homogeneity and stability of dose formulations were determined in samples taken after experimental start (see Table 1).

Table 1: Concentration, Homogeneity and Stability (after 4 Hours and 7 days)

| After Experimental Start – 08-Oct-2008 |                             |              |                    |
|--|-----------------------------|--------------|--------------------|
|  | Homogeneity / Concentration | Stability 1  | Stability 2        |
| Group 1                                | a b c                       | d (4 hr, RT) | e (7 days, 2-8 °C) |
| Groups 2 - 4                           | a b c                       | d (4 hr, RT) | e (7 days, 2-8 °C) |

RT: Room temperature

a,b etc: Internal sample designations

The concentration of the dose formulations were determined in samples taken during week 6 and 13 of the treatment (see Tables 2 and 3).

Table 2: Concentration

| During Week 6 – 12-Nov-2008 |               |             |             |
|-----------------------------|---------------|-------------|-------------|
|                             | Concentration | Stability 1 | Stability 2 |
| Group 1                     | a             | ---         | ---         |
| Groups 2 - 4                | a             | ---         | ---         |

Table 3: Concentration

| During Week 13 – 31-Dec-2008 |               |             |             |
|------------------------------|---------------|-------------|-------------|
|                              | Concentration | Stability 1 | Stability 2 |
| Group 1                      | a             | ---         | ---         |
| Groups 2 - 4                 | a             | ---         | ---         |

The aliquots for analysis of dose formulations were delivered to Dr. P. Sagelsdorff. No samples were discarded without the study director's consent. A detailed description of the method and the results are summarized in a part report prepared by Dr. P. Sagelsdorff and attached to the report in Appendix III on p. [324](#) ).

### 3.6 Treatment

- Method: Oral, by gavage
- Rationale for Method: Administration by gavage is a common and accepted route of exposure for studies of this type.
- Frequency of Administration: Daily, at approximately 24 hour intervals.
- Dose Concentrations:
- |          |                |
|----------|----------------|
| Group 1: | 0 mg/kg/day    |
| Group 2: | 100 mg/kg/day  |
| Group 3: | 300 mg/kg/day  |
| Group 4: | 1000 mg/kg/day |
- Rationale for Dose Level Selection: The dose levels were selected based on a previous 14-day dose range-finding oral (gavage) toxicity study in Wistar rats, RCC Study Number B99178.
- Dose Volume: 10 mL/kg body weight
- Duration of Acclimatization Period: 7 days
- Duration of Treatment Period: 90 days (allocation A females)  
91 days (allocation A males)

### **3.7 Phase Designation**

Phase 1: Acclimatization period  
Phase 2: Treatment period

### **3.8 Activities and Observations**

The following observations were recorded as follows:

#### **3.8.1 Viability / Mortality**

Observations for viability / mortality were recorded twice daily.

#### **3.8.2 Clinical Signs**

All animals were observed for clinical signs once during the acclimatization, twice daily on treatment days 1-3 and once daily thereafter.

### 3.8.3 Detailed Behavioral Observations

All animals were observed in their home cages, outside their home cages in a standard arena and in the hand. These observations were performed once before commencement of administration and once weekly (weeks 1 to 12) thereafter.

#### SUMMARY OF PARAMETERS (MINIMUM REQUIREMENT FOR EACH ANIMAL) OBSERVATIONS: DAILY CAGE-SIDE (D), PRETEST (P), WEEKLY (W), FOB (F)

|               | SCORE | PARAMETER             | D  | P | W    | F  |
|---------------|-------|-----------------------|----|---|------|----|
|               |       |                       | -1 |   | 1-12 | 13 |
| APPEARANCE    | 1-3   | Piloerection          | X  | X | X    | X  |
|               | 1-3   | Salivation            | X  | X | X    | X  |
|               | 1     | Hunched posture       | X  | X | X    | X  |
| MOTOR         | 1-3   | Ataxia                | X  | X | X    | X  |
|               | 1-3   | Tremor/twitching      | X  | X | X    | X  |
|               | 1     | Prostration           | X  | X | X    | X  |
|               | 1     | Circling              |    | X | X    | X  |
|               | 1-3   | Spasm                 |    | X | X    | X  |
| BEHAVIOR      | 1-3   | Hyperactivity         | X  | X | X    | X  |
|               | 1-3   | Somnolence            | X  | X | X    | X  |
|               | 1-3   | Increased exploration |    | X | X    | X  |
|               | 1-3   | Reduced grooming      |    | X | X    | X  |
|               | 1-3   | Vocalisation          |    | X | X    | X  |
| RESPIRATION   | 1     | Dyspnea               | X  | X | X    | X  |
|               | 1     | Tachypnea             | X  | X | X    | X  |
|               | 1     | Bradypnea             | X  | X | X    | X  |
| REFLEXES      | 1     | Blink                 |    | X | X    | X  |
|               | 1     | Pinna                 |    | X | X    | X  |
|               | 1     | Iridic light reflex   |    | X | X    | X  |
|               | 1     | Push-off (hind leg)   |    | X | X    | X  |
|               | 1     | Pain response         |    | X | X    | X  |
|               | 1     | Startle/hearing       |    | X | X    | X  |
|               | 1     | Righting reflex       |    | X | X    | X  |
| MISCELLANEOUS | 1-3   | Lacrimation           |    | X | X    | X  |
|               | 1     | Limbs cyanotic        |    | X | X    | X  |
|               | 1     | Mydriasis             |    | X | X    | X  |
|               | 1     | Miosis                |    | X | X    | X  |
|               | 1     | Exophthalmos          |    | X | X    | X  |
|               | 1-3   | Reduced muscle tone   |    | X | X    | X  |

NB: Findings that were detected during daily observation of the standard parameters were tracked throughout the study for onset in other animals and progression/regression in the afflicted animal, and are listed in the tables. Parameters marked with 'X' were specifically observed for presence or absence.

### **3.8.4 Functional Observational Battery**

During the last week of treatment (week 13), relevant parameters (presented in Section 3.8.3) from a modified Irwin screen test were evaluated in all animals. These observations were based upon the procedures used for the detailed behavioral observations. Any abnormal finding was recorded and graded in severity.

NB:

The results of the functional observational battery are presented in the summary and individual tables of the detailed clinical observations (weekly) under week 13.

#### **Grip Strength**

During week 13:                           02-Jan-2009 (allocation A females)  
  05-Jan-2009 (allocation A males)

Forelimb and hind limb grip strength measurements were performed using a push-pull strain gauge (Mecmesin, AFG 25N). The animals were placed with the forepaws inside a triangular grasping ring and with the hind paws outside a triangular grasping ring. Using one hand, the animals were held towards the base of the tail and steadily pulled away or towards the ring until the grip was broken. Each measurement was repeated three times, the means were calculated and recorded.

#### **Locomotor Activity**

During week 13:                           02-Jan-2009 (allocation A females)  
  05-Jan-2009 (allocation A males)

Locomotor (decreased or increased) activity was measured quantitatively with AMS Föhr Medical Instruments GmbH (FMI) and DeMeTec GmbH Activity Monitor System. Animals were monitored for a 60-minute period and the total activity of this time period was recorded. Low beams count was reported in 10-minute intervals as well as the total activity of the measuring period.

### **3.8.5 Food Consumption**

The food consumption was recorded once during the acclimatization period and weekly thereafter, using an on-line electronic recording system consisting of a Mettler balance connected to the Harlan Laboratories computer.

### **3.8.6 Body Weights**

Body weights were recorded weekly during acclimatization and treatment periods and before necropsy, using an on-line electronic recording system consisting of a Mettler balance connected to the Harlan Laboratories computer.

### **3.8.7 Ophthalmoscopic Examinations**

|                             |   |
|-----------------------------|---|
| Acclimatization:            | Once in all animals   |
| During Week 12 (Treatment): | In control and high-dose animals. The intermediate dose groups were not examined at Week 12 as no test item-related changes were seen in the animals of the high-dose groups. |

The ophthalmoscopic examinations of both eyes of all animals were performed after the application of a mydriatic solution (Ciba Vision AG, 3172 Niederwangen / Switzerland) using a Miroflex 2 Ophthalmoscope (Eisenhut Vet. AG, 4123 Allschwil / Switzerland). A description of any abnormality was recorded. For unilateral findings unless otherwise indicated in the tables, the contralateral eye was without abnormalities.

## **3.9 Clinical Laboratory Investigations**

Blood and Urine Sampling:

|                 |                                    |
|-----------------|------------------------------------|
| After 13 Weeks: | 06-Jan-2009 (allocation A females) |
|                 | 07-Jan-2009 (allocation A males)   |

Blood samples were drawn from the retro-orbital plexus from all animals under light isoflurane anesthesia. The animals were fasted in metabolism cages for approximately 18 hours before blood sampling but allowed access to water *ad libitum*. The samples were collected early in the working day to reduce biological variation caused by circadian rhythms. Blood samples were drawn from the retro-orbital plexus using a micro-hematocrit glass capillary tube.

Urine was collected during the 18 hours fasting period into a specimen vial, using a metabolism cage.

In the summary and individual tables the names of some parameters have been abbreviated.

Detailed methodology, abbreviations and general remarks are described in Appendix IV on p. [339](#).

Clinical laboratory data are expressed, with a few exceptions, in general accordance with the International System of Units (SI).

### 3.9.1 Hematology

The following hematology parameters were determined:

#### Complete Blood Cell Count

|  |                               |
|--|-------------------------------|
| Erythrocyte count  | Differential leukocyte count: |
| Hemoglobin   | Neutrophils                   |
| Hematocrit   | Eosinophils                   |
| Mean corpuscular volume                                      | Basophils                     |
| Red cell volume distribution width                           | Lymphocytes                   |
| Mean corpuscular hemoglobin                                  | Monocytes                     |
| Mean corpuscular hemoglobin concentration                    | Large unstained cells         |
| Hemoglobin concentration distribution width                  | Platelet count                |
| Reticulocyte count   |                               |
| Reticulocyte maturity index (low, medium, high fluorescence) |                               |
| Leukocyte count, total                                       |                               |

#### Hemoglobin Derivatives

|               |  |
|---------------|--|
| Methemoglobin | Heinz bodies (slides prepared but not evaluated) |
|---------------|--|

#### Coagulation

|  |                                       |
|--|---------------------------------------|
| Prothrombin time (= Thromboplastin time) | Activated partial Thromboplastin time |
|--|---------------------------------------|

### 3.9.2 Clinical Biochemistry

The following clinical biochemistry parameters were determined:

|                            |                            |
|----------------------------|----------------------------|
| Glucose                    | Gamma-glutamyl-transferase |
| Urea                       | Creatine kinase            |
| Creatinine                 | Sodium                     |
| Bilirubin, total           | Potassium                  |
| Cholesterol, total         | Chloride                   |
| Triglycerides              | Calcium                    |
| Phospholipids              | Phosphorus                 |
| Aspartate aminotransferase | Protein, total             |
| Alanine aminotransferase   | Albumin                    |

---

|                         |                        |
|-------------------------|------------------------|
| Lactate dehydrogenase   | Globulin               |
| Glutamate dehydrogenase | Albumin/Globulin ratio |
| Alkaline phosphatase    |                        |

### 3.9.3 Urinalysis

The following urine parameters were determined:

#### Physical Examination

|                                     |            |
|-------------------------------------|------------|
| Urine volume (18 hour)              | Color      |
| Specific gravity (relative density) | Appearance |

#### Chemical Examination

|          |              |
|----------|--------------|
| pH value | Urobilinogen |
| Nitrite  | Bilirubin    |
| Protein  | Erythrocytes |
| Glucose  | Leukocytes   |
| Ketones  |              |

## 3.10 Pathology

### 3.10.1 Necropsy

All animals were weighed and necropsied. Descriptions of all macroscopic abnormalities were recorded. All animals surviving to the end of the observation period were anesthetized by intraperitoneal injection of pentobarbitone and killed by exsanguination.

Sacrifice:

After 13 Weeks:                    06-Jan-2009 (allocation A females)  
    07-Jan-2009 (allocation A males)

Samples of the following tissues and organs were collected from all animals at necropsy and fixed in neutral phosphate buffered 4% formaldehyde solution except for eyes with optic nerve and harderian gland which were fixed in Davidson's solution or epididymides and testes which were fixed in Bouin's solution:

| Tissues / Organs  | Weight | Collect | Examine |
|---|--------|---------|---------|
| Adrenal glands  | X      | X       | X       |
| Aorta   |        | X       | X       |
| Bone (sternum, femur including joint)                                     |        | X       | X       |
| Bone marrow (femur)   |        | X       | X       |
| Brain - including section of medulla/pons, cerebral and cerebellar cortex | X      | X       | X       |
| Cecum   |        | X       | X       |
| Colon   |        | X       | X       |
| Duodenum  |        | X       | X       |
| Epididymides (fixed in Bouin's solution)                                  | X      | X       | X       |
| Esophagus   |        | X       | X       |
| Eyes w/optic nerve (fixed in Davidson's solution)                         |        | X       | X       |
| Harderian gland (fixed in Davidson's solution)                            |        | X       | X       |
| Heart including auricles  | X      | X       | X       |
| Ileum, with Peyer's patches   |        | X       | X       |
| Jejunum with Peyer's patches  |        | X       | X       |
| Kidneys   | X      | X       | X       |
| Larynx  |        | X       | X       |
| Lacrimal gland, exorbital   |        | X       | X       |
| Liver   | X      | X       | X       |
| Lungs, filled w/formalin at necropsy                                      |        | X       | X       |
| Lymph nodes – mesenteric and mandibular                                   |        | X       | X       |
| Mammary gland area  |        | X       | X       |
| Nasal cavity  |        | X       | X       |

### 3.10.2 Organ Weights

The organs from all animals listed in the table in Section 3.10.1 were weighed before fixation and recorded on the scheduled dates of necropsy. Relative organ weights were calculated on the basis of the body weight and brain weight.

The terminal body weight was recorded immediately prior to necropsy and the organ to terminal body weight ratios as well as organ to brain weight ratios were determined.

### 3.10.3 Histotechnology

All organ and tissue samples, as defined under Histopathology (see Section 3.10.4), were processed, embedded and cut at an approximate thickness of 2 to 4 micrometers and stained with hematoxylin and eosin.

### 3.10.4 Histopathology

Slides of all organs and tissues listed in the table in Section 3.10.1, which were collected at scheduled sacrifices from all animals of the control and high-dose groups and all gross lesions from all animals were examined by the study pathologist.

A description of all abnormalities is included in the pathology part report (see Appendix V on p. 352). Attempts were made to correlate gross observations with microscopic findings.

A peer review of findings was performed. The findings of the study pathologist and the peer reviewing pathologist compared favorably.

### **3.11 Data Compilation**

The study data were sorted and presented using the ToxControl LIMS computer system. All electronically recorded data are conserved on a magnetic medium.

Individual values were rounded before printing. All derived values that appear in the tables represent the rounded results of calculations that used the exact raw data value.

Locomotor activity was recorded on-line, and the results were printed and transcribed into the computer system for compilation and analysis.

Grip strength data were recorded on data sheets and transcribed into the computer system for compilation and analysis.

### **3.12 Statistical Analysis**

The following statistical methods were used to analyze grip strength, locomotor activity, body weight, ophthalmoscopic examinations, clinical laboratory data, organ weights and ratios as well as macroscopic findings:

- The Dunnett-test [see References] (many to one t-test) based on a pooled variance estimate was applied if the variables could be assumed to follow a normal distribution for the comparison of the treated groups and the control groups for each sex.
- The Steel-test [see References] (many-one rank test) was applied instead of the Dunnett-test when the data could not be assumed to follow a normal distribution.
- Fisher's exact-test [see References].

## 4 RESULTS

### 4.1 Analysis of Dose Formulations

(See Appendix III on p. 324 )

The dose formulations were in the range of 90.3 to 119% of the nominal concentration and homogenous distribution was confirmed by a CV of ≤6.29%.

Lysophospholipase in the dose formulations was found to be stable as the recoveries after storage for 4 hours at room temperature and for 7 days at 4°C were within 82.3 and 106% of the initial concentrations.

### 4.2 Observations

#### 4.2.1 Viability / Mortality

(See Individual Tables on p. 132 )

All animals survived until scheduled necropsy.

#### 4.2.2 Clinical Signs

(See Summary Tables on p. 50 , Individual Tables on p. 141 )

No clinical signs of toxicological relevance were noted during daily observations in males and females at all dose levels.

Kinked tail, transient hair loss and scabs were noted in isolated rats without dose dependence and were therefore considered to be of no toxicological relevance.

#### 4.2.3 Detailed Behavioural Observations

(See Summary Tables on p. 59 , Individual Tables on p. 150 )

No clinical signs were recorded during the weekly detailed behavioral observations (weeks 1-12).

#### **4.2.4 Functional Observational Battery**

No clinical signs were recorded during the functional observational battery (week 13).

##### **Grip Strength**

(See Summary Tables on p. [68](#), Individual Tables on p. [159](#) )

No test item-related changes were noted in fore- and hind limb grip strength in male rats at any dose level.

Statistically significant reductions in the mean fore limb grip strength were noted in females at all dose levels. A reduced mean hind limb grip strength was recorded in females treated with 300 mg/kg/day ( $p<0.05$ ). As no dose relationship could be established and as these changes were only observed in females, these findings were considered to be of no toxicological relevance.

##### **Locomotor Activity**

(See Summary Tables on p. [71](#), Individual Tables on p. [168](#) )

Males treated with 1000 mg/kg/day presented an elevated locomotor activity during the 20-30 minutes measurement interval ( $p<0.05$ ). This finding was considered to be fortuitous.

The mean locomotor activity of females was not affected by the treatment with the test item.

#### **4.2.5 Food Consumption**

(See Figures on p. [37](#), Summary Tables on p. [76](#), Individual Tables on p. [177](#) )

No statistical analysis was performed on the mean daily- and relative food consumption due to the low number of cages ( $n=2$ ).

A slight trend to reduced mean daily food comsumption was noted in test item-treated males at all dose levels from days 15-22 onwards (except on days 29-43 in males treated with 100 mg/kg/day). A slight trend to reduced mean daily food comsumption was noted in test item-treated females at all dose levels from days 36-43 onwards.

Reduced relative food consumption was recorded as follows:

- In males treated with 100 mg/kg/day from days 43-50 onwards (from days 29-36 onwards in females),
- In males treated with 300 mg/kg/day from days 50-57 onwards (from days 29-36 onwards in females),
- In males treated with 1000 mg/kg/day from days 15-22 onwards (from days 36-43 onwards in females).

Although these changes in mean daily- and relative food consumption were not accompanied by changes in body weight development of test item-treated animals, these findings were considered to be related to the treatment with the test item.

#### **4.2.6 Body Weights**

(See Figures on p. 43, Summary Tables on p. 86, Individual Tables on p. 195 )

The mean body weight development in control and test item-treated animals of both sexes was comparable at any dose level during the treatment period.

#### **4.2.7 Ophthalmoscopic Examinations**

(See Summary Tables on p. 96, Individual Tables on p. 213 )

Typical background findings (corneal opacity, persistent hyaloid vessel in vitreous body, persistent pupillary membrane) were noted without relationship to dose or treatment.

### **4.3 Clinical Laboratory Investigations**

#### **4.3.1 Hematology**

(See Summary Tables on p. 101, Individual Tables on p. 230 )

After the 13-week treatment period, no test item-related changes of toxicological relevance were noted in hematology parameters in rats of both sexes at any dose level.

An increased prothrombin time was recorded in females treated with 100 mg/kg/day ( $p<0.05$ ), which value remained within the range of the historical control data. This finding was considered to be incidental.

#### **4.3.2 Clinical Biochemistry**

(See Summary Tables on p. 107, Individual Tables on p. 247 )

After the 13-week treatment period, the following changes in clinical biochemistry parameters were noted:

- Increased cholesterol in male rats treated with 1000 mg/kg/day ( $p<0.05$ ),
- Dose-related increases in sodium in males (all  $p<0.01$ ) and increased sodium in females at 1000 mg/kg/day ( $p<0.01$ ). Elevations in sodium concentrations in Group 4 females are mainly due to low sodium concentrations recorded in control females,
- Increased chloride in male rats treated with 1000 mg/kg/day ( $p<0.01$ ),

- 
- Increased calcium in males at all dose levels ( $p<0.01$  at 100 mg/kg/day and 1000 mg/kg/day and  $p<0.05$  at 300 mg/kg/day) and in females treated with 100 mg/kg/day ( $p<0.01$ ),
  - Increased urea in females treated with 1000 mg/kg/day ( $p<0.01$ ),
  - Increased total bilirubin in females treated with 1000 mg/kg/day ( $p<0.05$ ).

As the values of all previously-mentioned parameters remained within the range of the historical control data and as these changes had no histopathological correlate, these findings were considered to be of no toxicological relevance.

Increased chloride concentrations were noted in females treated with 1000 mg/kg/day ( $p<0.05$ ), which values were below the range of the historical control data. This change is mainly due to low sodium concentrations recorded in control females.

### 4.3.3 Urinalysis

(See Summary Tables on p. [112](#), Individual Tables on p. [264](#) )

After the 13-week treatment period, no test item-related changes of toxicological relevance were noted in the urinalysis in males and females at any dose level.

At the end of the treatment period, female rats treated with 1000 mg/kg/day had elevated urinary bilirubin ( $p<0.05$ ), which values remained within the range of the historical control data. This finding was considered to be of no toxicological relevance.

## 4.4 Pathology

### 4.4.1 Organ Weights

(See Summary Tables on p. [115](#), Individual Tables on p. [273](#) )

Males treated with 1000 mg/kg/day had decreased mean absolute heart weight ( $p<0.05$ ). This change may be due to lower body weights recorded in males treated with 1000 mg/kg/day when compared to control males.

Statistically significant decreases in mean absolute kidney weights were recorded in females at all dose levels ( $p<0.05$  at 100 mg/kg/day and 300 mg/kg/day and  $p<0.01$  at 1000 mg/kg/day). Decreased kidney-to-body weight ratios were noted in females treated either with 100 mg/kg/day ( $p<0.05$ ) or with 1000 mg/kg/day ( $p<0.05$ ). Dose-related decreases in kidney-to-brain weight ratios were noted in females (all  $p<0.01$ ) when compared to control females. As these changes had no microscopical correlate, these findings were considered to be of no toxicological relevance.

Decreased mean absolute and relative ovaries weight was recorded in females treated with 300 mg/kg/day (all p<0.05). Decreased uterus-to-brain weight ratio was noted in females treated with 100 mg/kg/day (p<0.05). As these changes had no microscopical correlate, these findings were considered to be of no toxicological relevance.

#### **4.4.2 Macroscopic Findings**

(See Summary Tables on p. [128](#), Individual Tables on p. [298](#) )

At the end of the treatment period, no test item-related gross lesions were observed. The macroscopic findings recorded were considered to be within the range of normal background lesions, which may be seen in rats of this strain and age in oral toxicity studies and were considered to be incidental, reflecting the usual variability.

#### **4.4.3 Microscopic Findings**

(See Appendix V on p. [352](#) )

The test item Lysophospholipase produced no histological evidence of toxicological properties in the organs and tissues examined. All findings recorded were within the range of normal background lesions, which may be recorded in animals of this strain and age.

## 5 DISCUSSION AND CONCLUSION

Oral administration of Lyso-Phospholipase to Wistar rats at doses of 100, 300 and 1000 mg/kg/day for at least 13 weeks resulted in no premature death, no clinical signs of adverse nature during daily observations, detailed behavioural observations and during the functional observational battery, no effects on fore- or hind limb grip strength, no effects on locomotor activity, no effects on body weight development, no test item-related changes observed during the ophthalmoscopic examinations, no effects on hematology, clinical biochemistry or urinalysis parameters, no effects on organ weight, no test item-related macroscopic findings of toxicological relevance. The test item, Lyso-Phospholipase produced no histological evidence of toxicological properties in the organs and tissues examined.

Insofar as the marginally reduced mean daily absolute and relative food consumption values noted in rats of both sexes were not accompanied by concomitant changes in mean body weight, and no other findings of toxicological relevance were noted, these differences were considered to be unrelated to the test item.

Therefore, the no-observed effect level (NOEL) and the no-observed-adverse-effect level (NOAEL) were considered to be above 1000 mg/kg/day, the highest dose level used in this study.

ALL NECROPSIES  
MALES**

**Group 3 (300 mg/kg)**

---

Animal 21        PLANNED NECROPSY , 07-JAN-2009

SKIN                TIP OF TAIL: KINKED TAIL.

---

Animal 22        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

---

Animal 23        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

---

Animal 24        PLANNED NECROPSY , 07-JAN-2009

MANDIBULAR L.NODE        FOCUS/FOCI, SEVERAL, D=1 MM, DARK RED.

---

Animal 25        PLANNED NECROPSY , 07-JAN-2009

STOMACH                MUCOSA, FUNDUS: FOCUS/FOCI, ISOLATED, D=3X1 MM, REDDISH.

---

Animal 26        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

---

Animal 27        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

---

Animal 28        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

---

Animal 29        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

---

**MACROSCOPICAL FINDINGS  
AFTER WEEK 13 OF TREATMENT  
ALL NECROPSIES  
MALES**

**Group 3 (300 mg/kg)**

Animal 30      PLANNED NECROPSY , 07-JAN-2009

---

NO FINDINGS NOTED

---

**MACROSCOPICAL FINDINGS  
AFTER WEEK 13 OF TREATMENT  
ALL NECROPSIES  
MALES**

**Group 4 (1000 mg/kg)**

---

Animal 31        PLANNED NECROPSY , 07-JAN-2009

THYMUS              FOCUS/FOCI, MANY, D=1 MM, DARK RED.

---

Animal 32        PLANNED NECROPSY , 07-JAN-2009

KIDNEYS              RIGHT SIDE: PELVIC DILATION.

---

Animal 33        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

---

Animal 34        PLANNED NECROPSY , 07-JAN-2009

NO FINDINGS NOTED

## TEST REPORT

**Sample No. 455759**

Order No. 520772 GLP Schadstoffuntersuchung  
Sample Arrival 09.07.2008  
Sample code M/R HALTUNG GLP  
Alleinfuttermittel für Mäuse und Ratten  
Rezeptur: 3433  
GLP-Batch 44/08  
Fabr.-Code: 0807002  
hergestellt: 03.07.08

Sample packing plastic bag

limits acc.  
GV-SOLAS  
Result A-08-2001

## Substance Method

### Trace-Elements/Heavy-Metals

Explanation: "<", n.d.: not detected, below limit of detection .

The actual limit of detection can be different to the standard value for a particular analysis due to matrix effects or insufficient sample volume.

Remark: OM=original matter, DM=dry matter

## BACTERIOLOGICAL ASSAY OF DRINKING WATER, ITINGEN

Official Laboratory Liestal, September 03, 2008

Basel-Landschaft Ref.no. 20006941

**Sampling point:** 59.99.N **Net water RCC Ltd, Itingen,  
Room No. 10**

Sampled on: July 29, 2008

### Sample:

Time of sampling 7.45  
Water temperature (°C) 15.9

**BACTERIOLOGICAL TEST:**

Aerobic mesophilic bacteria / ml 0  
 E.coli / 100 ml 0  
 Enterococci / 100 ml 0  
 Clostridium perfringens 0

## **ASSESSMENT:**

At the time of sampling, the tested bacteriological parameters met the requirements for drinking water according to "Artikel 3 der Verordnung über Trink-, Quell-, und Mineralwasser (SR 817.022.102)

### Responsibilities

Study Scientist (Analytics):  
Technical Coordinator(s):

### Schedule of Bioanalytical Part

Experimental Starting Date: 08-Oct-2008  
Experimental Completion Date: 31-Dec-2008

## 1 SUMMARY

The purpose of this study was to determine the content, homogeneity and stability of Lyso-Phospholipase in dose formulation (bidistilled water). Determination was carried out based on the determination of the phospholipase activity using Lyso-phosphatidylcholine as substrate or on the total protein content using a bicinchoninic acid formulation for the colorimetric detection and the test item as reference standard.

Dose formulation samples were taken on 8-Oct-2008, 12-Nov-2008 and 31-Dec-2008. In the dose formulation samples containing 10, 30 and 100 mg Lyso-Phospholipase/mL, mean concentrations of 90.3-108%, 96.3-112% and 91.3-119%, respectively, of the nominal concentrations were obtained at the three sampling occasions.

Homogenous distribution was confirmed by a CV of  $\leq 6.29\%$ .

Following storage for 4 hours at room temperature and following storage for 7 days at 4°C the recoveries were within 82.3 and 106% of the initial concentrations (88.4-126% of nominal concentrations).

In conclusion, the dose formulations were in the range of 90.3 to 119% of the nominal concentration and homogenous distribution was confirmed by a CV of  $\leq 6.29\%$ . Lyso-Phospholipase in the dose formulations was concluded to be stable as the recoveries after storage for 4 hours at room temperature and for 7 days at 4°C were within 82.3 and 106% of the initial concentrations.

## **2 PURPOSE**

The purpose of this study was to determine the content, homogeneity and stability of Lyso-Phospholipase in dose formulation (bidistilled water). Determination was carried out based on the determination of the phospholipase activity using Lyso-phophatidylcholine as substrate or on the total protein content using a bicinchoninic acid formulation for the colorimetric detection and the test item as reference standard.

## 3 MATERIALS AND METHODS

### 3.1 Study Samples

Application formulations were prepared on 8-Oct-2008, at the Test Facility with nominal concentrations of 0 mg/mL (Group 1), 10 mg/mL (Group 2), 30 mg/mL (Group 3) and 100 mg/mL (Group 4). 4 Hour stability samples were prepared accordingly 4 hours in advance and stored for 4 hours at room temperature. A sample taken from the top, middle and bottom of each preparation was shipped on ice to the Study Scientist for Dose Formulation Analysis and analysed within 5 days after receipt, using a determination of total protein.

7 Day stability samples were kept for 7 days at 4°C, shipped on ice on 15-Oct-2008, and analysed immediately using a determination of Lyso-phospholipase activity.

Additional samples were prepared on 12-Nov-2008 and 31-Dec-2008 and shipped immediately on ice to the Study Scientist for Dose Formulation Analysis. The samples were analysed immediately after receipt using a determination of Lyso-phospholipase activity.

### 3.2 Test Item

For further information about the test item (test product, dose and mode of administration), which was used within the in-life phase, see study plan (final version: 09-Sep-2008). The test item was also used as analytical reference item.

### 3.3 Reagents and Materials

| Reagent  | Batch              | Supplier            |
|--|--------------------|---------------------|
| BCA Reagent A, containing sodium carbonate, sodium bicarbonate, bicinchoninic acid and sodium tartrate in 0.1 M sodium hydroxide | JC111572           | Pierce, Switzerland |
| BCA Reagent B, containing 4% cupric sulfate  | IB111574           | Pierce, Switzerland |
| Working Reagent (WR): Prepare WR by mixing 50 parts of BCA Reagent A with 1 part of BCA Reagent B (50:1, Reagent A:B)            | N/A                | Pierce, Switzerland |
| Free Fatty Acid, half micro test   | 11383175/ 13872420 | Roche, Switzerland  |
| L- $\alpha$ -Lysophosphatidylcholine   | L4129/ 038K5206    | Sigma, Switzerland  |

Standards and Quality Control samples (QCs) were prepared in bidistilled water with Lyso-Phospholipase.

### 3.4 Analytical Procedure

#### 3.4.1 Total Protein Determination

For the quantitative determination of Lyso-Phospholipase in dose formulations (bi-distilled water) a photometric assay using bicinchoninic acid was used (Microplate Procedure).

The dose formulation samples were diluted with PBS into the range of the analytical assay.

1. Pipette 25 µl of each standard or unknown sample replicate into a microplate well (working range = 20-1000 µg/ml).
2. Add 200 µl of the WR to each well and mix plate thoroughly on a plate shaker for 30 seconds.
3. Cover plate and incubate at 37°C for 30 minutes.
4. Cool plate to RT.
5. Measure the absorbance at 562 nm on a plate reader.
6. Subtract the average 562 nm absorbance measurement of the Blank standard replicates from the 562 nm measurements of all other individual standard and unknown sample replicates.
7. Prepare a standard curve by plotting the average Blank-corrected 562 nm measurement for each standard vs. its concentration in µg/ml. Use the standard curve (four-parameter fit) to determine the protein concentration of each unknown sample.

##### 3.4.1.1 Preparation of Standards

Independent standard solutions were prepared containing 23.5 to 1506 µg/mL Lysophospholipase (nominal concentrations) in PBS.

A stock solution of 50 mg Lyso-Phospholipase/ml was prepared in PBS. The stock solution was further diluted with PBS to a final concentration of 5'000 µg/ml. The working dilution was further diluted in PBS according to the following example:

| Standard | Concentration<br>(µg/ml) | Dilution Factor |
|----------|--------------------------|-----------------|
| Std1     | 1506                     | 3.32            |
| Std2     | 753                      | 2               |
| Std3     | 377                      | 2               |
| Std4     | 188                      | 2               |
| Std5     | 94.1                     | 2               |
| Std6     | 47.1                     | 2               |
| Std7     | 23.5                     | 2               |
| Std8     | 0                        | -               |

A four parameter logistic fitting of the optical density at 562 nm against the nominal concentration of the standard was used to calculate sample concentrations.

### 3.4.1.2 Preparation of Quality Control Samples (QCs)

Independent QC solutions were prepared containing 602, 329 and 56.5 µg/mL Lyso-Phospholipase (nominal concentrations) in PBS.

An aliquot of the stock solution (50 mg Lyso-Phospholipase/ml) was diluted with PBS to a final concentration of 5'000 µg/ml. The working dilution was further diluted in PBS according to the following example:

| QC  | Concentration (µg/ml) | Dilution Factor |
|-----|-----------------------|-----------------|
| QC1 | 602                   | 2.5             |
| QC2 | 329                   | 1.83            |
| QC3 | 56.5                  | 5.83            |

### 3.4.2 Determination of Lyso-Phospholipase Activity

Determination was carried out based on the determination of the Lyso-phospholipase activity using Lyso-phosphatidylcholine as substrate.

The dose formulation samples were diluted with bidistilled water into the analytical range of the assay.

1. 250 µl of substrate (Lyso-phosphatidylcholine, 20 mM in bidistilled water) and 250 µl of buffer (0.02 mM acetate, pH 4.5) were incubated for 5 minutes at 55°C.
2. Then 100 µl of standard, QCs or sample were added and mixed.
3. After exactly 1 and 10 minutes of incubation at 55°C, each, 100 µl were treated with 1 ml reagent A (pre-tempered for 5 min at 37°C) and mixed.
4. After exactly 5 minutes of incubation at 37°C, 100 µl of a solution containing 0.55 ml reagent B and 0.55 ml N-Ethylmaleimide were added.
5. This mixture was incubated for 5 minutes at 37°C.
6. Following cooling down in a waterbath, the optical density at 546 nm was measured.

### 3.4.2.1 Preparation of Standards

Two independent standard solutions were prepared containing 0.2 to 0.3 µg/mL Lyso-Phospholipase (nominal concentrations) in bidistilled water.

A stock solution of about 100 mg Lyso-Phospholipase/ml was prepared in bidistilled water. The stock solution was further diluted with bidistilled water to a final concentration of 10 µg/ml. The working dilution was further diluted in bidistilled water according to the following typical example:

| Standard | Concentration (µg/ml) | Dilution Factor |
|----------|-----------------------|-----------------|
| Std1     | 0.312                 | 32.1            |
| Std2     | 0.260                 | 1.2             |

A linear interpolation (extrapolation) of the optical density at 546 nm against the nominal concentration of the standard was used to calculate sample concentrations

### 3.4.2.2 Preparation of Quality Control Samples (QCs)

Independent QC solutions were prepared containing 0.2 to 0.3 µg/mL Lyso-Phospholipase (nominal concentrations) in bidistilled water.

An aliquot of the stock solution (100 mg Lyso-Phospholipase/ml) was diluted with bidistilled water to a final concentration of 10.0 µg/ml. The working dilution was further diluted in bidistilled water according to the following example:

| QC   | Concentration (µg/ml) | Dilution Factor |
|------|-----------------------|-----------------|
| Std1 | 0.312                 | 32.1            |
| QC1  | 0.208                 | 1.5             |

## 4 RESULTS

### 4.1 Accuracy and Precision of Analytical Method

[Table 1](#) and [Table 2](#)

QC samples (two to three concentration levels) revealed mean accuracies of 98.7 to 101% for the total protein determination and of 88.9 to 104% for the LPL activity determination, respectively.

### 4.2 Dose Formulation Analysis

[Table 3](#) to [Table 5](#)

Dose formulation samples taken on 8-Oct-2008, 12-Nov-2008 and 31-Dec-2008 were diluted with bidistilled water into the analytical range of the assay.

In the dose formulation samples containing 10, 30 and 100 mg Lysophospholipase/mL, mean concentrations of 90.3-108%, 96.3-112% and 91.3-119%, respectively, of the nominal concentrations were obtained at the three sampling time points.

Homogenous distribution was confirmed by a CV of ≤6.29%.

Following storage for 4 hours at room temperature and following storage for 7 days at 4°C the recoveries were within 82.3 and 106% of the initial concentrations (88.4-126% of nominal concentrations).

## 5 CONCLUSION

In conclusion, the dose formulations were in the range of 90.3 to 119% of the nominal concentration and homogenous distribution was confirmed by a CV of  $\leq 6.29\%$ .

Lyso-Phospholipase in the dose formulations was concluded to be stable as the recoveries after storage for 4 hours at room temperature and for 7 days at 4°C were within 82.3 and 106% of the initial concentrations.

**APPENDIX IV:**  
**CLINICAL LABORATORY INVESTIGATIONS**

## CLINICAL LABORATORY INVESTIGATIONS

Blood and Urine Sampling: After 13 Weeks: 06-Jan-2009 (allocation A females)  
07-Jan-2009 (allocation A males)

Blood samples were drawn from the retro-orbital plexus from all animals under light isoflurane anesthesia. The animals were fasted in metabolism cages for approximately 18 hours before blood sampling but allowed access to water *ad libitum*. The samples were collected early in the working day to reduce biological variation caused by circadian rhythms.

The assay was performed at Harlan Laboratories Ltd. (Füllinsdorf) under internal laboratory quality control conditions to assure reliable test results.

In the summary and individual tables the names of some parameters have been abbreviated. Any abbreviation has been defined in this section. Clinical laboratory data are expressed, with a few exceptions, in general accordance with the International System of Units (SI).

Key to abbreviations of units:

Key to Abbreviations of Units:

|     |         |   |                    |       |                      |
|-----|---------|---|--------------------|-------|----------------------|
| L   | liter   | g | gram               | m     | milli ( $10^{-3}$ )  |
| mol | mole    | G | giga ( $10^9$ )    | $\mu$ | micro ( $10^{-6}$ )  |

| U   | Unit    |   |                    |       |                      |

## Hematology

The following anticoagulants were used during blood collection:

Complete Blood Cell Count: Tri-potassium-EDTA  
Methemoglobin: Lithium heparin  
Coagulation: Sodium citrate, 3.2% (1 part anticoagulant to 9 parts blood)

### Complete Blood Cell Count

| Globulin                 |              | g/L    | Calculated value (total protein minus albumin) |                 |
| Albumin / Globulin Ratio | A/G RATIO    |        | Calculated value (albumin / globulin)          |                 |

## Urinalysis

### Physical Examination

| Parameter                                | Abbreviation | Unit  | Method / Instrumentation   |
|--|--------------|-------|----------------------------|
| Urine volume (18-hour)                   |              | mL    | Volumetric <sup>6</sup>    |
| Relative density<br>(= Specific gravity) | REL DENS     | rel.1 | Refractometer <sup>7</sup> |
| Color                                    |              |       | Visual inspection          |
| Appearance                               |              |       | Visual inspection          |

The following urine components were investigated using a semi-automated test strip analyzer Miditron (Roche Diagnostics) applying reflectance spectroscopy. Results are given as discrete values representing a concentration range (semi-quantitative results).

### Chemical Examination

| Parameter    | Abbreviation | Unit    | Set Points                   | Instrumentation       |
|--------------|--------------|---------|------------------------------|-----------------------|
| pH-value     | pH           |         | 5.0, 6.0, 6.5, 7.0, 8.0, 9.0 | Miditron <sup>8</sup> |
| Nitrite      |              | score   | 0 (negative), 1 (positive)   | Miditron              |
| Protein      |              | g/L     | 0, 0.25, 0.75, 1.50, 5.00    | Miditron              |
| Glucose      |              | mmol/L  | 0, 3, 6, 17, 56              | Miditron              |
| Ketones      |              | mmol/L  | 0, 0.5, 1.5, 5.0, 15.0       | Miditron              |
| Urobilinogen | UROBILI      | µmol/L  | 0, 17, 68, 135, 203          | Miditron              |
| Bilirubin    |              | µmol /L | 0, 17, 50, 100               | Miditron              |
| Erythrocytes | ERY          | per µL  | 0, 10, 25, 50, 150, 250      | Miditron              |
| Leukocytes   | LEU          | per µL  | 0, 25, 100, 500              | Miditron              |

4452 Itingen / Switzerland

### Responsibilities

Study Scientist  
(Pathology):  
Head of QA:

## 1 SUMMARY

The purpose of this oral toxicity study was to assess the cumulative toxicity of Lyso-Phospholipase when administered daily to rats by gavage for a period of 90 days (females) or 91 days (males). This study should provide a rational basis for toxicological risk assessment in man.

80 animals were allocated to four groups. The groups comprised 10 animals per sex, which were sacrificed after 90 days for female and 91 days for males of treatment. The animals received the test item, Lyso-Phospholipase, at concentrations of 100, 300 and 1000 mg/kg/day (Group 2, Group 3 and Group 4, respectively) by gavage. Control animals (Group 1) received the vehicle (bidistilled water) only.

At the end of the treatment period all animals were weighed, sacrificed, necropsied and examined *post mortem*. Histological examination was performed on all study plan organs and tissues from control and high dose animals, and on all gross lesions from all animals.

Under the conditions of this study, there were no premature deaths. All animals survived the scheduled study period.

At necropsy, performed at the end of treatment period, no test item-related macroscopic findings were recorded.

The test item, Lyso-Phospholipase produced no histological evidence of toxicological properties in the organs and tissues examined.

## 2 MATERIALS AND METHODS

### 2.1 Allocation

| Allocation and Dose Levels |   | Group 1 control* | Group 2 | Group 3 | Group 4 |
|----------------------------|---|------------------|---------|---------|---------|
| mg/kg bw/day               |   | 0                | 100     | 300     | 1000    |
| Males                      | A | 1 - 10           | 11 - 20 | 21 - 30 | 31 - 40 |
| Females                    | A | 41 - 50          | 51 - 60 | 61 - 70 | 71 - 80 |

\* Control animals were treated with the vehicle, bidistilled water, only  
A Main study animals

### 2.2 Necropsy and Histopathology

Necropsies and histological preparation of the tissues were performed at Harlan Laboratories Ltd., Itingen / Switzerland. Samples of the following tissues and organs were collected from all animals at necropsy and, unless otherwise indicated, fixed in neutral phosphate buffered 4% formaldehyde solution:

| Tissues / Organs  | Weight | Collect | Examine |
|---|--------|---------|---------|
| Adrenal glands  | X      | X       | X       |
| Aorta   |        | X       | X       |
| Bone (sternum, femur including joint)                                     |        | X       | X       |
| Bone marrow (femur)   |        | X       | X       |
| Brain - including section of medulla/pons, cerebral and cerebellar cortex | X      | X       | X       |
| Cecum   |        | X       | X       |
| Colon   |        | X       | X       |
| Duodenum  |        | X       | X       |
| Epididymides (fixed in Bouin's solution)                                  | X      | X       | X       |
| Esophagus   |        | X       | X       |
| Eyes w/optic nerve (fixed in Davidson's solution)                         |        | X       | X       |

| Vagina   |        | X       | X       |
| All gross lesions                              |        | X       | X       |

Resulting sections were stained by hematoxylin and eosin. Sections from all animals of groups 1 and 4 and all occurring gross lesions of all animals were examined by light microscopy.

## **2.3 Data Compilation**

The animal data and necropsy findings were transferred electronically via transfer file into the PathData System.

The microscopic findings were recorded during histopathologic examination by the pathologist and directly entered into the PathData System. The slides were evaluated during February 2009.

Histologic changes were described, wherever possible, according to distribution, severity and morphologic character. Severity scores were assigned as given under "Explanation of Codes and Symbols".

All microscopic findings are listed in the "Table of Individual Microscopic Findings", along with an explanation of the codes and symbols used. Computer-generated incidence tables derived from these data are also presented as well as the complete narrative of the macroscopic and microscopic findings.

## **2.4 Peer Review**

The following sections were reviewed by (Pathology, at Harlan Laboratories Ltd., Itingen / Switzerland): all organs of animal No. 1, 36, 44 and 73.

The assessment of the study pathologist and reviewing pathologist compared favourable.

## **3 RESULTS**

### **3.1 Mortality**

All animals survived the scheduled study period.

### **3.2 Organ Weights**

There were no differences indicating an effect of the test item. A few statistically significant deviations in average organ weights at the end of treatment period were considered to be incidental, reflecting the usual individual variability.

### **3.3 Macroscopic Findings**

There were no gross lesions that could be attributed to treatment with the test item. All gross lesions recorded were considered to be within the range of normal background alterations.

### **3.4 Microscopic Findings**

The test item Lyso-Phospholipase produced no histological evidence of toxicological properties in the organs and tissues examined. All findings recorded were within the range of normal background lesions, which may be recorded in animals of this strain and age.

## **4 DISCUSSION AND CONCLUSION**

Under the conditions of this experiment, no test item-related macroscopic findings were recorded. The test item, Lyso-Phospholipase produced no histological evidence of toxicological properties in the organs and tissues examined.

**EXPLANATION OF CODES AND SYMBOLS**

---

**CODES AND SYMBOLS USED AT ANIMAL LEVEL:**

---

M = Male animal  
F = Female animal  
KO = Terminal sacrifice group

**CODES AND SYMBOLS USED AT ORGAN LEVEL:**

---

G = Gross observation checked off histologically  
\* = Comment in text of individual animal data  
0 = Tissue not present for histologic examination  
' = Histologic examination not required  
+ = Organ examined, findings present  
- = Organ examined, no pathologic findings noted (AOFT only)  
( = Only one of paired organs examined/present

**CODES AND SYMBOLS USED AT FINDING LEVEL:**

---

GRADE 1 = Minimal / very few / very small  
GRADE 2 = Slight / few / small  
GRADE 3 = Moderate / moderate number / moderate size  
P = Finding present, severity not scored  
( = Finding unilateral in paired organs

TEXT OF GROSS AND MICROSCOPIC FINDINGS  
DOSE GROUP : 01, 0 mg/kg

MALE

\* STATE AT NECROPSY: K0  
DAYS ON TEST : 91 \* ANIMAL NO. : 1  
.....

\* NECROPSY FINDINGS

NO NECROPSY OBSERVATIONS NOTED.

\* MICROSCOPIC FINDINGS

LIVER:

-Inflammatory cell focus/foci, grade 1

SPLEEN:

-Extramedullary hemopoiesis, grade 1

-Hemosiderin storage, grade 1

KIDNEYS:

-Hyaline droplets, proximal tubulus epithelium, multifocal,  
unilateral, grade 1

PEYER'S PATCHES (ILEUM):

-Lymphoid hyperplasia, grade 1

LUNGS:

-Vascular mineralization, focal/multifocal, grade 1

THYMUS:

-Atrophy / involution, grade 1

MANDIBULAR GLANDS:

Only one of paired organs examined/present

PARATHYROID GLANDS:

Only one of paired organs examined/present

ADRENAL CORTICES:

-Vacuolation, zona fasciculata/reticularis, multifocal,  
bilateral, grade 1

EYES:

-Retro-orbital hemorrhage, unilateral, grade 1

OPTIC NERVES:

Only one of paired organs examined/present

HARDERIAN GLANDS:

-Porphyrin deposits, unilateral, grade 1

THYMUS:

- Atrophy / involution, grade 1

MANDIBULAR GLANDS:

Only one of paired organs examined/present

SUBLINGUAL GLANDS:

Only one of paired organs examined/present

MANDIBULAR LYMPH NODES:

- Congestion, bilateral, grade 1

This finding corresponds to necropsy observation no: 01.

THYROID GLAND (BOTH LOBES):

- Thymic remnant, unilateral

ADRENAL CORTICES:

- Subcapsular cell hyperplasia, unilateral, grade 1

EYES:

- Retro-orbital hemorrhage, unilateral, grade 2

HARDERIAN GLANDS:

- Porphyrin deposits, bilateral, grade 1

SKELETAL MUSCLE:

- Myodegeneration, focal, grade 1

VAGINA:

- Estrus

BONE MARROW (FEMUR):

- Fatty replacement, grade 1

TEXT OF GROSS AND MICROSCOPIC FINDINGS  
DOSE GROUP : 02, 100 mg/kg

FEMALE

\* STATE AT NECROPSY: K0  
DAYS ON TEST : 90 \* ANIMAL NO. : 60  
.....

\* NECROPSY FINDINGS

NO NECROPSY OBSERVATIONS NOTED.

\* MICROSCOPIC FINDINGS

NO EXAMINATION REQUIRED.

TEXT OF GROSS AND MICROSCOPIC FINDINGS  
DOSE GROUP : 03, 300 mg/kg

MALE

\* STATE AT NECROPSY: K0  
DAYS ON TEST : 91 \* ANIMAL NO. : 21

.....

\* NECROPSY FINDINGS

SKIN/SUBCUTIS:

01: TIP OF TAIL: KINKED TAIL.  
NO OTHER NECROPSY OBSERVATIONS NOTED

\* MICROSCOPIC FINDINGS

SKIN/SUBCUTIS:

-No histological correlate  
This finding corresponds to necropsy observation no: 01.

---

\* STATE AT NECROPSY: K0  
DAYS ON TEST : 91 \* ANIMAL NO. : 22

.....

\* NECROPSY FINDINGS

NO NECROPSY OBSERVATIONS NOTED.

\* MICROSCOPIC FINDINGS

NO EXAMINATION REQUIRED.

TEXT OF GROSS AND MICROSCOPIC FINDINGS  
DOSE GROUP : 03, 300 mg/kg

MALE

\* STATE AT NECROPSY: K0  
DAYS ON TEST : 91 \* ANIMAL NO. : 23

.....  
\* NECROPSY FINDINGS

NO NECROPSY OBSERVATIONS NOTED.

\* MICROSCOPIC FINDINGS

NO EXAMINATION REQUIRED.

---

\* STATE AT NECROPSY: K0  
DAYS ON TEST : 91 \* ANIMAL NO. : 24

.....  
\* NECROPSY FINDINGS

MANDIBULAR LYMPH NODES:

01: FOCUS/FOCI, SEVERAL, D=1 MM, DARK RED.

NO OTHER NECROPSY OBSERVATIONS NOTED

\* MICROSCOPIC FINDINGS

MANDIBULAR LYMPH NODES:

-Congestion, focal, bilateral, grade 1

This finding corresponds to necropsy observation no: 01.

PATHOL. NO.: 21029 IHI  
DATE : 13-MAY-09  
PathData@System V6.2b5

TEXT OF GROSS AND MICROSCOPIC FINDINGS  
DOSE GROUP : 04, 1000 mg/kg

FEMALE

CONT./FF. ANIMAL NO. : 71

SKELETAL MUSCLE:

-Mononuclear infiltration, focal, grade 1

VAGINA:

-Diestrus

BONE MARROW (FEMUR):

-Fatty replacement, grade 1

LARYNX:

-Inflammatory cell infiltrate, grade 1

ALL OTHER PROTOCOL TISSUES WITHOUT PATHOLOGIC FINDINGS.

\* STATE AT NECROPSY: K0  
DAYS ON TEST : 90

\* ANIMAL NO. : 72

\* NECROPSY FINDINGS

BODY CAVITIES:

01: UTERINE ADIPOSE TISSUE, RIGHT SIDE: NODULE(S), D=13 MM,  
GRAY WHITE, REDDISH, FIRM.

NO OTHER NECROPSY OBSERVATIONS NOTED

\* MICROSCOPIC FINDINGS

TRACHEA:

-Inflammatory cell infiltrate, submucosa, grade 1

LIVER:

-Inflammatory cell focus/foci, grade 1

-Peribiliary cell infiltrate, grade 1

SPLEEN:

-Extramedullary hemopoiesis, grade 2

-Hemosiderin storage, grade 2

## II. The host/recipient organism

The recipient strain used for the genetic modifications in constructing RF10625 was ***Trichoderma reesei* strain [REDACTED]**, a genetically modified derivative of [REDACTED] mutant strain.

### a. Taxonomy

*Trichoderma reesei* is a hypercellulolytic fungus which was found on deteriorating military fabrics such as tents and clothing.

Taxonomic studies have shown that the species *Trichoderma reesei* consists only of a single isolate QM6a and its derivatives (Nevalainen et al. 1994).

The taxonomic classification of *T. reesei* is: *Hypocreaceae*, *Hypocreales*, *Hypocreomycetidae*, *Sordariomycetes*, *Pezizomycotina*, *Ascomycota*, *Fungi*, according to Index Fungorum database.

*T. reesei* can be identified by PCR-fingerprinting assay and sequence analyses of the nuclear ribosomal DNA region containing the internal transcribed spacers (ITS-1 and ITS-2) and the 5.8S rRNA gene (Kuhls et al. 1996).

**Synonyms<sup>1</sup>:** *Trichoderma reesei* is the species name given to the anamorphic form (the form which reproduces asexually) of the fungus whose teleomorphic form (the form which reproduces sexually) is now understood to be *Hypocreajecorina* (Kuhls et al. 1996; Seidl et al. 2008).

*Trichoderma reesei* was formerly known as *Trichoderma longibrachiatum*. Therefore, it is of relevance to note that enzymes have been approved that are produced by *T. reesei* under the name of *T. longibrachiatum*<sup>2</sup>.

The *T. reesei* parental strain [REDACTED] was characterized by the Centraalbureau voor Schimmelcultures (CBS) in the Netherlands as *Trichoderma reesei*. It was identified based on the

<sup>1</sup> Reference: Mycobank taxonomic database (see:  
<http://www.mycobank.org/Biolomics.aspx?Table=Mycobank&Page=200&ViewMode=Basic>).

<sup>2</sup> see: <http://amfep.drupalgardens.com/sites/amfep.drupalgardens.com/files/Amfep -List-of-Commercial-Enzymes.pdf>

sequences of Internal Transcribed Spacer 1 and 2 and the 5.8S gene and Translation Elongation Factor 1 $\alpha$ . *T. reesei* [REDACTED] was deposited as a CBS culture (safe deposit) as CBS 114041.

The classification of [REDACTED] (also referred to as [REDACTED]<sup>3</sup>) as *Trichoderma reesei* has been confirmed by the Centraalbureau voor Schimmelcultures (CBS) in the Netherlands ([Appendix #13.1](#)).

Therefore the recipient can be described as followed:

|  |   |
|--|---|
| Genus:                                     | <i>Trichoderma</i>                                |
| Species:                                   | <i>Trichoderma reesei</i>                         |
| Subspecies (if appropriate):               | not applicable                                    |
| Generic name of the strain:                | [REDACTED]  |
| Previous or other name(s) (if applicable): | none  |
| Commercial name:                           | Not applicable. The organism is not sold as such. |

**Synonyms**<sup>4</sup>: *Trichoderma reesei* is the species name given to the anamorphic form (the form which reproduces asexually) of the fungus whose teleomorphic form (the form which reproduces sexually) is now understood to be *Hypocrea jecorina*.

*Trichoderma reesei* was formerly known as *Trichoderma longibrachiatum*.

## b. Construction of the host

The *Trichoderma reesei* host strain is a classical mutant derived from *T. reesei* QM6a.

*Trichoderma reesei* [REDACTED] was developed from the wild type strain QM6a by conventional mutagenesis.

The genetically modified strain [REDACTED] used as a recipient in construction of RF10625 derives from [REDACTED]. For a summary of the genetic construction steps from [REDACTED] see [Appendix #13.2](#).

<sup>3</sup> Both numbers are indifferently referring to the same strain, depending on ROAL or AB Enzymes reference system. For easy reading, the RF reference number will be use most of the time throughout the dossier.

<sup>4</sup> Reference: Mycobank taxonomic database (see: <http://www.mycobank.org/Biolomics.aspx?Table=Mycobank&Page=200&ViewMode=Basic>).

### III. Origin and donor of vector and inserts

#### a. The enzyme gene

##### Origin

The *Fusarium oxysporum* lipase gene for lipase protein overproduced by RF10625 was designed and synthesized using the preferred codon usage for *Trichoderma reesei*. A codon-optimized *Fusarium oxysporum* lipase [REDACTED] encoding sequence was designed based on the *Hypocrea jecorina* preferred codon usage (<http://www.kazusa.or.jp/codon/cgi-bin/showcodon.cgi?species=51453>) and synthesized by Eurofins (Germany). The lipase DNA sequence, with ATG (Met) codon at position +1 comprises an open reading frame of [REDACTED]. The codon-optimized lipase sequence expressed in *T. reesei* showed 86% identity to the original lipase sequence from *Fusarium oxysporum*. **The amino acid sequence remained unchanged.**

##### Allergenicity

In order to specifically evaluate the risk that the lipase enzyme would cross react with known allergens and induce a reaction in an already sensitized individual, sequence homology testing to known allergens was performed. This test used a 80 amino acid (aa) sliding window search as well as conventional FASTA alignment (overall homology), with the threshold of 35% homology as recommended in the most recent literature (Food and Agriculture Organization of the United Nations January/2001; Ladics et al. 2007; Goodman et al. 2008).

A sequence homology comparison test was then performed using a database of allergens from the Food Allergy Research and Resource Program (FARRP), University of Nebraska, Allergen Database (Version 14, January 20, 2014), which contains the amino acid sequences of known and putative allergenic proteins.

The resulting alignments of the full-length lipase protein sequence to any allergenic proteins in the allergen database showed no sequences with E () <1.000000. In addition, the lipase protein sequence

showed no matches of greater than 35% to the known allergens when searching for 80 amino acid alignments and no perfect match when searching for a stretch of eight amino acids.

See [Appendix #13.3](#) for further information.

Conclusion:

Based on the results obtained from the bioinformatics approach to estimate potential allergenicity on relatedness to known allergens and taking into account the most recent scientific recommendations on the interpretation of such data, and based on the fact that the enzyme is typically denatured during the food manufacturing process and that any residual enzyme still present in the final food will be subject to digestion in the gastro-intestinal system, it is not likely that the lipase produced by *Trichoderma reesei* RF10625 under evaluation will cause allergic reactions after ingestion of food containing the residues of these enzymes.

## b. Vector

The *Fusarium oxysporum* lipase [REDACTED] encoding sequence was designed and synthesized using the preferred codon usage for *Trichoderma reesei*. The lipase gene contains an AvrII site four nucleotides upstream of the ATG and a Pael site downstream of the stop-codon. The lipase gene was cloned into the pCR4-TOPO vector, resulting in the plasmid Lip-FO.

The plasmid Lip-FO was digested with AvrII and Pael. The AvrII-Pael fragment containing the lipase gene was ligated into the Spel and Pael sites of the plasmid pAB140SP ([Appendix #13.4](#)) resulting in the plasmid pAB140SP-LipFO. In this plasmid the *Fusarium oxysporum* lipase gene was placed under the control of the *Trichoderma reesei* [REDACTED] promoter and [REDACTED]-terminator.

The plasmid pAB140SP-LipFO was characterized by restriction with endonucleases and the construct was confirmed by DNA sequencing. The expression plasmid pAB140SP-LipFO is shown in more detail in [Appendix #13.5](#).

The description of the plasmid Lip-FO used in the construction of the plasmid pAB140SP-LipFO is included in [Appendix #13.6](#).

The plasmid pAB140SP-LipFO was digested with *NotI* and the expression cassette containing the lipase gene was isolated ([Appendix #13.7](#)). The purified expression cassette was used for transformation of *T. reesei* [REDACTED].

### c. Promoter

The lipase is expressed under the strong [REDACTED] promoter.

## IV. Introduced genetic sequence

Standard molecular biology methods were used in the construction of the expression plasmid. The expression cassette fragment used in fungal transformation does not contain any vector derived sequences as it is isolated from the expression plasmid by restriction digestion and purification from an agarose gel. It is free from any harmful sequences and contains the following genetic materials:

- **Fusarium oxysporum lipase gene:** The lipase gene was synthesized using the preferred codon usage for *Trichoderma reesei*.  
[REDACTED]  
[REDACTED]  
[REDACTED]. The sequence of the lipase gene and the deduced amino acid sequence of the encoded protein are included [Appendix #14.8](#). For the construction of the expression vector, the gene is fused at its 5'-end to the [REDACTED] promoter. This promoter is strong and is used to drive *lipase* expression, to obtain high yields of lipase enzyme.
- **Linker:** synthetic DNA sequence contained *PacI* and *BamHI* restriction sites
- [REDACTED] **terminator:** To ensure termination of transcription the native [REDACTED] terminator is used.
- **Linker:** synthetic DNA sequence with *StuI* restriction site

- ***Aspergillus nidulans amdS gene***: the gene has been isolated from *Aspergillus nidulans* VH1-TRSX6 (Kelly, Hynes 1985). *Aspergillus nidulans* is closely related to *Aspergillus niger*, which is used in industrial production of food enzymes. The gene codes for an acetamidase that enables the strain to grow on acetamide as a sole nitrogen source. This characteristic has been used for selecting the transformants. The product of the *amdS* gene, acetamidase, can degrade acetamide and is not harmful or dangerous. The *amdS* marker gene has been widely used as a selection marker in fungal transformations without any disadvantage for more than 20 years.

Of the above genetic materials, the lipase gene and *Aspergillus nidulans amdS* gene are not naturally present in the host genome.

The DNA fragments that have been transformed to *T. reesei* host strain are well characterized, the sequences of the genes are known, and the fragments are free from any harmful sequences.

## V. Construction of the recombinant production organism

The transformation of *T. reesei* host strain with the expression cassettes was performed as described by Penttilä et al. (1987) with the modifications described in Karhunen et al. (1993).

Southern blot analyses were performed to the genome of the production strain RF10625. Results indicated that [REDACTED] of the expression cassettes were integrated in the genome of strain RF10625 ([Appendix #13.9](#)).

## VI. Description of the production organism

### a. Identity and taxonomy

The transformed production strain containing the lipase gene is ***Trichoderma reesei* strain RF10625** which is deposited in the "Centraalbureau voor Schimmelcultures" (CBS) in the Netherlands with the deposit number CBS 134213.

The taxonomic classification of the *T. reesei* is: *Hypocreaceae*, *Hypocreales*, *Hypocreomycetidae*, *Sordariomycetes*, *Pezizomycotina*, *Ascomycota*, Fungi, according to Index Fungorum database. See [section II.a.](#) for more taxonomy details.

### b. Stability of the genetic traits in the GMM

*T. reesei* strains are widely used in biotechnological processes because of their known stability.

The production strain RF10625 is stable in terms of genetic traits. The genetic materials in the expression cassettes have been integrated as part of the genome and are as stable as any natural gene. The integrated genetic materials are not acting as mobilisable elements and they do not contain mobilisable elements.

Potential changes in the genome of the production strain could theoretically occur during the propagation in the fermentation process. Therefore, Southern blot analysis was performed after fermentation process of the RF10625 strain (see [Appendix #13.10](#)). The results revealed that the lipase gene stays genetically stable in *T. reesei* genome over necessary time that is needed for industrial fermentation process of the RF10625 production strain.

Additionally, the stability is also followed as equal production of the lipase in a number of fermentation batches performed for the *T. reesei* strain RF10625. The activity measurements from parallel successful fermentations showed that the productivity of the RF10625 strain remains unchanged.

### c. Mobilisation and transfer capacity

The inserted DNA does not include any mobile genetic element. Additionally, it should be highlighted that *T. reesei* genome lacks a significant repetitive DNA component and no extant functional transposable elements have been found in the genome (Kubicek et al. 2011; Martinez et al. 2008). This results to low risk of transfer of genetic material.

#### **d. Presence of acquired antimicrobial resistance genes**

The review article by Nevalainen et al. (1994) reveals that some species belonging to *Trichoderma* genus are able to secrete various types of antibiotics in laboratory cultures. However, strains of *T. reesei* used in industrial applications are proven to be absent of antibiotic activities (Hjortkjaer et al. 1986; Coenen et al. 1995). The absence of antibiotic activities, according to the specifications recommended by JECFA was also confirmed.

Additionally, no genes have been introduced during the genetic construction that encode antimicrobial resistance.

#### **VII. Information on any Significant Similarity between the Amino Acid Sequence of the Enzyme and that of Known Protein Toxins**

A study was conducted to assess the toxicity of the *Fusarium oxysporum* lipase using bioinformatics tools.

A homology search was performed from the non-redundant protein sequences database (nr) using the BLAST-P (protein – protein BLAST) program, v. 2.6.1+ (Altschul et al., 1997; <http://blast.ncbi.nlm.nih.gov/>). The amino acid sequence of the lipase (██████████) was used as the query sequence in the searches. For the purpose of toxicity analysis, additional search criterion was used to limit the search to sequences that are related to toxins. The word “toxin” was given as the Entrez Query.

For detailed methods and results, see [Appendix #13.11](#).

According to the results obtained from the searches performed it can be concluded that the lipase protein does not show significant homology to any protein sequence identified or known to be a toxin.
