Re: to A1186 – Soy Leghemoglobin in meat analogue products

This is a supporting submission to the re-exhibition of changes to food standards codes to permit the use of Soy Leghemoglobin in meat analogue products.

I acknowledge the agency's responses and minor amendments arising from matters raised in the first consultation round by NGOs, primary producers and other stakeholders.

As previously submitted to the prior round of consultation, I support the introduction of the described GM ingredient in Australia, within the parameters set out for confining its use to the applicant's range of plant-based protein products.

Regards,

[REDACTED]
