Submission Text:	<p>I object to the use of Roundup on any crops, as there is a link between Roundup and cancer. The fact that Monsanto had to pay huge amounts of money for health problems caused by Roundup should be a hint that there is a problem. For example - a California jury has ordered Monsanto to pay more than \$2bn to a couple that got cancer after using its weedkiller, marking the third and largest verdict against the company over Roundup. A problem for</p>

scientists investigating the physiological activities of pesticides is that giants like Monsanto aren't required to make their full ingredients lists public. It is the combination of different ingredients that needs to be taken into account - not just glyphosate. There are a number of documentaries and articles on Monsanto - like this one:

<https://sustainablepulse.com/2018/05/24/the-peril-on-your-plate-watch-the-new-rt-documentary-on-gmos-and-glyphosate-here/#.XroTRGgvNPY> Can we not just use more organic approaches instead of spraying chemicals on our food? I believe that the number of illnesses that are directly related to all those chemicals we spray will be apparent in the years to come. Our bodies are simply not coping with the amount of toxins that they are bombarded with since the industrial revolution. To me it seems that making money is more important than ensuring our safety. Anita
