Subject: Submission on A1193

I wish to express my opposition the A1193 and the irradiation by various means to fresh fruit and vegetables.

It is bad enough if this day and age that our fresh fruit and veg are laced with pesticides but to now be dealing the the proposal that they could also be irradiated with further chemicals (labelled as enzymes) it more concerning.

We are already being slowly poisoned by our foods, especially those that can not afford to purchase organic, to add Irradiation using products that are GMO derived, and for many people allergy causing, some anaphalatic responses it totally irresponsible.

Our population is being poisoned by mainstream foods already. The addition of pesticides has destroyed the soil, the abundance of micronutrients and natural biodynamic colony of microbes vital for our bodies for nutrition uptake and feeding our gut microbiome.

Our world is prevalent with disease, intolerances and allergies due to the poisoning of our food supply, adding another element, no matter how "safe" it is stated to be will further destroy and poison the popution.

As stated at the begining, I completely oppose the proposal

Regards,
