**Subject:** A1193 Submission: Irradiation of food as a phytosanitary measure for all fresh fruit and vegetables - irradiation of humanity, irradiation of nature

### ***Food Irradiation Alert = Prevention of Human + Vegetable Irradiation Harm.***

*Having extensively on the proposed legislation, I posit it is neither all- inclusive nor definitively critical of basic shortcomings of irradiation threats and protection of life.*

*The advent of computers should reinforce the knowledge that "Little changes mean a lot" – changing one symbol can arrest a whole programme.*

*We also know that chemical changes – biologically, through genes, enzymes, etc... even more than inorganic – operate at a molecular\* level. An inorganic example: even adding one atom of Oxygen to a life-giving Oxygen molecule changes it into Ozone, a highly reactive, sometimes even toxic substance to animals,*

*So, when a change such as irradiation of food is contemplated, unless one can observe and measure - using the whole gamut of parameters - a range of molecules in the consumer of that food, both before, during and after that irradiation is applied, one cannot properly assess whether consequent changes have beneficial, neutral or harmful effects.*

*Hence the rule: before change is authorised, one must prove that health and safety are not compromised, using repeatable testing of all conceivable parameters, whether appropriate or not – so to always be able to assess potential side-effects of the proposed changes.*

*For example: the inordinate haste to install 4G and 5G (the latter banned in many countries) transmission towers for short-term convenience and/or commercial benefits (only when applied in the low Gigahertz range, though). The same radiation, at higher Gigahertz affects all living creatures to the extent of annihilation of all animal and plant species within its range. There are insufficient safeguards in place against such a potential disaster, merely because the 4G/5G international, authorising body does not test all parameters beyond the potential for heat damage!*

*Yours truly*
