**Categories:** [REDACTED]

In reviewing the Proposal M1040, we have the following query. Supporting document 1 – Proposal M1014; page 54 states

### Rimsulfuron

An *All other foods except animal food commodities* MRL for rimsulfuron could not be established as even at the LOQ, the contribution of all other foods to dietary exposure is >50% of the ADI. Consequently, there was no MRL that was practical or could adequately manage off-label use.

DuPont believes that the Australian ADI for rimsulfuron is 0.02 mg/kg bw/day (Australian ADI List, June 2013). In exposure calculations conducted by DuPont based on the EU diet, using LOQs for all crop and livestock commodities resulted in a maximum exposure of 0.0008 mg/kg bw/day. Which is approximately 4% of the ADI. Admittedly these calculations are not done using the "Australian diet". However, we would like to make sure that there has not been an error as there is a significant difference between about 4% and >50% of the ADI.

Kind regards,

Greg J Mitchell | Registration & Regulatory Affairs Manager - ANZ | Du Pont (Australia) Pty Ltd
