To whom it concerns,
Most Australians don't want to eat genetically modified (GM) foods.
All GM foods must be independently assessed for their health and environmental risks be labelled as GM, so as a shopper concerned about my food supply chain, I can make the best choices for my family.

I am deeply concerned that FSANZ has relied on advice from scientists with serious conflicts of interest, to conclude these new GM foods pose no greater risks than existing foods. Those seeking to commercialise GM plants, animals and microbes should play no role in deciding how - or even whether - foods derived from them should be regulated.

The proposed changes would make Australia one of very few countries in the world to allow genetically modified animal products into our food chain . We must protect our clean food credentials , especially meat and milk. Once lost they can never be recovered.

Thank you for taking my concerns into consideration.
