To whom it may concern,

I am writing in regards to the proposed changes that will allow genetically modified (GM) foods into our food system without strict regulation and labelling. It is my understanding that the changes to the Food Code in Australia will allow the inclusion of GM foods into our food supply without adequate evidence of their safety or long-term health effects. Additionally, we as consumers will have no ability to identify, or choose to avoid, these GM food sources. I strongly oppose these changes. I do not believe that agrochemical and manufacturing companies can (nor should) be responsible or trusted to test for the safety of GM foods. FSANZ should continue to regulate our food safety, which includes full disclosure and labelling of food products, and exclusion of GM foods that could pose unidentified risks to our health.

Thank you for taking my concerns into consideration.
