Submission regarding Proposal P1007 - Primary Production & Processing Requirements For Raw Milk Products

When large areas of the world eat and drink raw milk and eat raw cheese, what is that makes Australia so special that it cannot allow this as a possibility for those that choose to imbibe. Are our cows and goats more diseased than those in other parts of the world or is this a control and fear issue? At a time when evidence based assessments are available the arguments against the importation of raw milk products does not stand up. Please allow us to choose to have high end raw milk cheeses and stop this paternalistic concern with our health (there are already too many people in the world!)
