Proposal P1007 - Primary Production  
and Processing Requirements for Raw  
Milk Products

I support this proposal.

Reasons.

From my experiences in France,  
milk products such as butter and  
cheese made from raw milk  
have superior flavour and quality  
to the same products made  
from pasteurised milk.

I recall a time in Britain,  
when Tuberculin Tested (TT) milk,  
which was neither pasteurised nor  
homogenised, was <sup>widely</sup> available. This  
milk had excellent flavour, & quality.
